List of Figures

Chapter 1

Introduction

Figure 1.1: Types of Dermatomycosis
Figure 1.3.1: Classification of dermatophytes on the basis of infection site
Figure 1.5.1: Target of antifungal agents
Figure 1.9.1: Plant Calotropis procera

Chapter 2

Review of literature

Figure 2.4.1: Activities of different plant parts of Calotropis procera in various organic solvents

Chapter 4

Results

Figure 4.1: Percent inhibition in colony diameter vs concentration of petroleum ether leaf extract at different incubation periods of M. fulvum
Figure 4.2: Percent inhibition in colony diameter vs concentration of chloroform leaf extract at different incubation periods of M. fulvum
Figure 4.3: Percent inhibition in colony diameter vs concentration of ethyl acetate leaf extract at different incubation periods of M. fulvum
Figure 4.4: Percent inhibition in colony diameter vs concentration of ethyl alcohol leaf extract at different incubation periods of M. fulvum
Figure 4.5: Percent inhibition in mycelial weight vs concentration of petroleum ether leaf extract at different incubation periods of M. fulvum
Figure 4.6: Percent inhibition in mycelial weight vs concentration of chloroform leaf extract at different incubation periods of M. fulvum
Figure 4.7: Percent inhibition in mycelial weight vs concentration of ethyl acetate leaf extract at different incubation periods of M. fulvum
Figure 4.8: Percent inhibition in mycelial weight vs concentration of ethyl alcohol leaf extract at different incubation periods of M. fulvum
Figure 4.9: Percent inhibition in sporulation vs concentration of petroleum ether leaf extract at different incubation periods of M. fulvum
Figure 4.10: Percent inhibition in sporulation vs concentration of chloroform leaf extract at different incubation periods of M. fulvum
Figure 4.11: Percent inhibition in sporulation vs concentration of ethyl acetate leaf extract at different incubation periods of M. fulvum
Figure 4.12: Percent inhibition in sporulation vs concentration of ethyl alcohol leaf extract at different incubation periods of *M. fulvum*

Figure 4.13: Percent inhibition in colony diameter vs concentration of petroleum ether leaf extract at different incubation periods of *M. canis*

Figure 4.14: Percent inhibition in colony diameter vs concentration of chloroform leaf extract at different incubation periods of *M. canis*

Figure 4.15: Percent inhibition in colony diameter vs concentration of ethyl acetate leaf extract at different incubation periods of *M. canis*

Figure 4.16: Percent inhibition in colony diameter vs concentration of ethyl alcohol leaf extract at different incubation periods of *M. canis*

Figure 4.17: Percent inhibition in mycelial weight vs concentration of petroleum ether leaf extract at different incubation periods of *M. canis*

Figure 4.18: Percent inhibition in mycelial weight vs concentration of chloroform leaf extract at different incubation periods of *M. canis*

Figure 4.19: Percent inhibition in mycelial weight vs concentration of ethyl acetate leaf extract at different incubation periods of *M. canis*

Figure 4.20: Percent inhibition in mycelial weight vs concentration of ethyl alcohol leaf extract at different incubation periods of *M. canis*
