List of Plates

Plate 1: Macro & microscopic slides of the fungal species *M. canis, M. fulvum* and *T. mentagrophytes*

Plate 2: Macro & microscopic slides of the fungal species *A. niger* and *A. fumigatus*

Plate 3: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *M. fulvum* by reduction in colony diameter

Plate 4: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *M. fulvum* by reduction in mycelial biomass

Plate 5: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *M. canis* by reduction in colony diameter

Plate 6: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *M. canis* by reduction in mycelial biomass

Plate 7: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *T. mentagrophytes* by reduction in colony diameter

Plate 8: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *T. mentagrophytes* by reduction in mycelial biomass

Plate 9: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *A. niger* by reduction in colony diameter

Plate 10: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *A. niger* by reduction in mycelial biomass

Plate 11: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *A. fumigatus* by reduction in colony diameter

Plate 12: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *A. fumigatus* by reduction in mycelial biomass

Plate 13: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *M. canis* and *M. fulvum* by Paper disc diffusion method

Plate 14: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *T. mentagrophytes* and *A. niger* by Paper disc diffusion method

Plate 15: Antifungal activity of different concentrations of Ethyl alcohol leaf extract against *A. fumigatus* by Paper disc diffusion method

Plate 16: Separation of compounds by column chromatography present in ethyl alcohol extract of *C. procera* leaves in different mobile phase with indication of bands.

Plate 17: The bioactive fraction collected from column chromatography showing three spots of different Rf values by TLC

Plate 18: TLC plate with single spot showing only one compound present after purification of the bioactive fraction

Plate 19: Different fractions collected by column chromatography and Crystals of compound CPR8 after purification of fraction CM 5:1 8th
Plate 20: Antifungal activity of different concentrations of compound CPR8 against *T. mentagrophytes* and *M. fulvum* by Paper disc diffusion method

Plate 21: Antifungal activity of different concentrations of compound CPR8 against *A. niger*, *A. fumigatus* and *M. canis* by Paper disc diffusion method

Plate 22: Antifungal activity of different concentrations of compound EE91-9 against *A. niger* and *A. fumigatus* by Paper disc diffusion method

Plate 23: Antifungal activity of different concentrations of fraction CPR4 against *T. mentagrophytes* and *M. fulvum* by Paper disc diffusion method

Plate 24: Antifungal activity of different concentrations of fraction CPR4 against *A. fumigatus* and *A. niger* by Paper disc diffusion method

Plate 25: Antifungal activity of different concentrations of fraction CPR-9 against *M. fulvum* and *T. mentagrophytes* by Paper disc diffusion method

Plate 26: Antifungal activity of different concentrations of fraction CPR-9 against *M. canis* by Paper disc diffusion method

Plate 27: Antifungal activity of different concentrations of fraction EE73-1 against *M. fulvum* and *T. mentagrophytes* by Paper disc diffusion method

Plate 28: Antifungal activity of different concentrations of fraction EE73-1 against *A. niger* and *A. fumigatus* by Paper disc diffusion method
