F. Survey of Pollen and Fungal Allergy

(i) Outside India

(ii) In India

G. Aerobiological Studies in Bangalore

III. MATERIAL AND METHODS

1. Botanical Studies

a. Field Botanical Studies

   1) Pollen Herbarium

b. Aerobiological Survey

   1) Airspora sampling techniques

      i) Burkard trap

      ii) Vertical cylinder trap

      iii) Culture plate technique

Identification of Pollen grains
Identification of fungal spores and fungal colonies

. Preparation of Mountant

Photomicrography

Meteorological Data

Statistical Analysis

IV. OBSERVATIONS

A. Field Botanical Studies

   a) Description of the sampling site, vegetation and weather

   b) Pollination Calendar
B. Incidence and morphological descriptions of significant airborne pollen grains

a) Morphology of airborne pollen grains
b) Morphology of airborne fungal spores
c) Colonies of airborne fungal spores

C. Meteorological Observations

Temperature
Relative Humidity
Rainfall
Wind Speed
Winter
Summer
Monsoon

V. RESULTS

Airborne fungal spores and pollen grains
Airborne fungal spores
Seasonal variations of major fungal spores
Airborne pollen grains
Seasonal periodicity study by Vertical cylinder trap
Circadian periodicity of airborne fungal spores and pollen grains
Seasonal variations in circadian patterns
Correlation of airborne fungal spores and pollen grains with meteorological data
(i) Airborne fungal spores
(ii) Airborne pollen grains
VI. DISCUSSION

Field Botanical Survey
Pollination Calendar
Aerobiological Studies
Airborne fungal spores
Seasonal periodicity of major fungal types
Circadian periodicity of major fungal types
Culture plate studies
Pollen grains
Circadian periodicity of pollen grains
Effect of meteorological parameters on the airspora
Prediction for pollen and spore forecasts
Clinical Studies
