Acknowledgements

I will take this opportunity to express my sincere thanks to all those people who made this PhD research possible.

I would like to acknowledge first and foremost my mentor and guide, Dr. Ashish K. Lele, for his continuous guidance and unflinching support that enabled the completion of this PhD research. Dr. Lele brought out the best in me and also helped me grow as an independent researcher. He has given me a lot of his valuable time (even on weekends) and on holidays so that this work could be completed. In every role as a senior colleague, as a teacher, and as a friend, Dr. Lele has continuously shown me the correct path and for this I am forever grateful to him. I also acknowledge his wife, Ashwini, who was also very supportive towards me and tolerated my presence in their home on numerous occasions.

This work would not have gone to fruition without the co-guidance of Dr. Pankaj Doshi who was tremendously supportive of my work and was always available as a friend whenever I needed his advice on any matter. He always asked the right and pertinent questions that enabled me to think critically. I am indebted to him. Special thanks are due to Mr. Sumeet Thete and Mr. Sourya Banik who helped me with the CFD modeling of the EFC process. I learnt a lot about Matlab programming from them and I wish them all the luck for their future endeavors.

I acknowledge the support of the CSIR-NCL’s current Director, Dr. Sourav Pal and past Director, Dr. S. Sivaram, who enabled me to carry out this research. I am also grateful to Dr. B. D. Kulkarni and Dr. Vivek Ranade, past and current Dy. Director and Chair, CE&PD Div. of CSIR-NCL, who supported me throughout the course of this research. They were always available for administrative and scientific support. I also acknowledge the help and support received from Dr. M. G. Kulkarni, Dr. A. J. Varma and Dr. M. V. Badiger from the PSE Div. I gratefully acknowledge the support of all staff members who directly or indirectly helped me during the course of the PhD research.

I would now like to acknowledge my wonderful friends and colleagues who stood by me during the course of this PhD research. My Polymer Processing Center (PPC) colleagues: Vivek, Deenadayalan, Swapnil, Sanjay, Lal, Kiran, Sameer, Pradip, Nandakishore, Naveen; who were always there for me in
good and not-so-good times. They were instrumental in helping me directly or indirectly in all work that is undertaken in PPC. I also acknowledge the guidance and support of Mrs. Deepa Dhoble for helping me with HT-GPC activities and teaching me about polymer characterization. Mr. Saroj also played a key role in assisting me with HT-GPC characterization. I acknowledge the help received from Dr. Mohandas and Dr. Ajith from our NMR group who helped in HT-NMR analysis of the polymer materials used in this research. From the Complex Fluids & Polymer Engineering (CFPE) group, I acknowledge the support and guidance of Dr. K. Guruswamy (Guru) who always took an active interest in this research and provided valuable suggestions. I also thank friends in CFPE group: Anuya, Kalyani and Prashant for their help towards me. I also thank Kiran Pandare for being a valuable friend at CSIR-NCL.

I would also like to thank University of Pune staff: Mrs. Bhavalkar, Mrs. Chavan, and Mr. More for the kind help that they always extended towards me.

In the end, I gratefully acknowledge my family members and friends without whose backing and support this research would ever have completed. My wonderful wife, Purva, continuously motivated me to complete the PhD and my parents who stood steadfast behind me and provided me with all education and facilities that I ever needed growing up. My son, Saket, provided me with much needed boost with his innocent smile and never-ending questions about my work. I will forever cherish my family’s love towards me. My special thanks to my in-laws who were also there for me at every step of the way. At this point, I whole-heartedly acknowledge my best friends: Ajit, Amit, Hemant and their families who provided me constant support and encouragement all the time.

Last but not the least; I gratefully acknowledge the financial support towards this research that was received from the central government agencies: the Department of Science and Technology (DST) (through Sanction order no. SR/S3/CE/59/2008) and the Department of Chemicals & Petrochemicals (DCPC) through their funding of a virtual center of excellence named CoE-SPRIT™ established at CSIR-NCL.
