LIST OF FIGURES

Figure 1.1: Some example of unsaturated acid structure…………………………… 7
Figure 1.2: Some example of saturated acid structure……………………………… 8
Figure 1.3 Curing of unsaturated polyesters. (a) Species in polyester resin ready for laminating. (b) Structures present in cured polyester resin…………… 17
Figure 1.4: Schematic representation of volume change of thermoset resins during cure…………………………………………………………………………… 21
Figure 2.1: Volume change profile of (a) conventional resin and (b) low profile resin……………………………………………………………………………… 26
Figure 2.2: A photograph of two asymmetric composite laminates, the transparent one with and the white one with 25% LPA………………………………… 27
Figure 2.3: Illustration of LPA mechanism……………………………………………… 33
Figure 2.4: Example of reinforcement geometries and their surface area/volume ratios……………………………………………………………………………… 38
Figure 2.5: The structure of 2:1 layered silicates……………………………………….. 39
Figure 2.6: Idealized accessible structures for PLSNs…………………………………… 41
Figure 2.7: Schematic of X-ray diffraction spectra for different types of polymer layered silicate nanocomposites……………………………………………… 44
Figure 2.8: Schematic view of the nucleation and growth mechanism in nylon-6 nanocomposite…………………………………………………………………………… 45
Figure 3.1: Effect of LPA concentration on volume shrinkage for UP resin after cure isothermal at 115°C and room temperature…………………………… 54
Figure 3.2: Effect of curing temperature on shrinkage control with different contents of LPA.......................................................... 56

Figure 3.3: The effect of Cloisite 30B and Cloisite 20A on volume shrinkage control for low profile UP resin after isothermal cure at 115°C...................... 59

Figure 3.4: Molecular structure of various quaternary amine intercalants used to modify Montmorillonite (MMT) as Cloisite 20A, and Cloisite 30B........... 61

Figure 3.5: Effect of Cloisite 20A concentration on volume shrinkage control for low profile UP resin cured isothermal at 115°C.............................. 65

Figure 3.6: Effect of different cure temperature on volume shrinkage for low profile UP resin (PMMA 5%) samples................................................. 67

Figure 3.7: Data graph of the correlation equation z = a + bx + cy + dx^2 + ey^2 + fxy obtained for shrinkage at 115 °C........................................ 74

Figure 3.8: The graph of absolute error for shrinkage at 115 °C............. 74

Figure 3.9: Data graph of the correlation equation z = a + bx + cy + dx^2 + ey^2 + fxy obtained for shrinkage at room temperature......................... 75

Figure 3.10: The graph of absolute error for shrinkage at room temperature... 75

Figure 4.1: Effect of LPA (5%) and nanoclay 20A (3%) on reaction rate of UP resin with 1% TBPB at 115°C isothermally cured by DSC.............. 83

Figure 4.2: Effect of LPA (5%) and nanoclay 20A (3%) on conversion profiles of UP resin with 1% TBPB at 115°C isothermally cured by DSC.... 84

Figure 4.3: XRD patterns for clay 20A powder and nanocomposites of UP/LPA/20A................................................................. 85

Figure 4.4: SEM micrographs of the fractured surface for the UP/St/LPA/clay systems cured isothermally at 115°C and initiated by 1% TBPB.................................. 88

Figure 4.5: The effect of 5% PMM and 3% nanoclay 20A on the Impact strength of cured samples......................................................... 90
Figure 4.6: The effect of 5% PMM and 3% nanoclay 20A on the flexural strength of cured samples. ............................................................... 91

Figure 4.7: Effect of LPA (5%) and nanoclay 20A (3%) on reaction rate of UP resin with 1.5 wt% MEKP and 0.5 wt% cobalt octoate, at 115°C isothermally cured by DSC ................................................................. 92

Figure 4.8: Effect of LPA (5%) and nanoclay 20A (3%) on conversion profiles of UP resin with 1.5 wt% MEKP and 0.5 wt% cobalt octoate, at 115°C isothermally cured by DSC ................................................................. 93

Figure 4.9: SEM micrographs of isothermally cured samples of UP/St/LPA/clay systems at 115°C and initiated by with using 1.5 wt% (MEKP) and 0.5 wt% cobalt octoate ................................................................. 96
