Fig. 2.1 Core radial wavefunction densities for restricted and unrestricted Hartree Fock

Fig. 2.2 Core polarization for 2s and 4s

Fig. 2.3 The internal hyperfine magnetic at solute nuclei in an iron host plotted vs the atomic number \( z \) of the solute.

Fig. 2.4 The internal hyperfine magnetic fields at solute nuclei in a cobalt host plotted vs the atomic number \( z \) of the solute.

Fig. 2.5 The internal hyperfine magnetic fields at solute nuclei in a nickel host plotted vs the atomic number \( z \) of the solute.

Fig. 2.6 Calculated polarization \( P \) for s electrons as a function of the valence \( Z \) of the impurity atoms. For iron \( P_h=1 \). Curve 'a' is the Daniel and Friedal estimate and curve 'b' is Campbell's estimate.

Fig. 2.7 Calculated polarization at the site of an s-p impurity as a function of the number \( Z \) of s-p electrons. \( P_h \) is the polarization at the host gadolinium site.
CHAPTER III

Fig. 3.1 Typical gamma-gamma cascade of two radiations

Fig. 3.2 The precession of the nuclear angular momentum $I$ and the nuclear dipole moment $\mu$ around the magnetic field $H$.

CHAPTER IV

Fig. 4.1 Circuit diagram of the photo-multiplier and the cathode follower.

Fig. 4.2 Circuit diagram of the fast amplifier unit.

Fig. 4.3 Circuit diagram of the fast coincidence unit.

Fig. 4.4 Circuit diagram of the univibrator and inverter unit.

Fig. 4.5 Circuit diagram of a slow triple coincidence unit.

Fig. 4.6 Block diagram of a slow fast coincidence set up.

Fig. 4.7 Details of the arrangement for performing experiments at liquid nitrogen temperature.

Fig. 4.8 Planer view of the chamber.

Fig. 4.9 Design of the ends A and B of the brass jacket.

Fig. 4.10 Photograph of the actual set up.

CHAPTER V
