ACKNOWLEDGEMENT

The completion of a thesis not only brings an appreciated respite from many months of demanding effort; it also provides a welcome opportunity to acknowledge in writing the many people who helped along the way. I have had the unique privilege of working on a subject which encompasses, besides Statistics, the disciplines of Psychiatry and Medicine. Hence, I have had rich interaction with several generous individuals. Without question, this thesis could not have become a reality were it not for their help and valuable suggestions.

At the outset, I would like to offer my heartfelt gratitude to my research supervisor Dr. Pranita Sarmah, Professor, Department of Statistics, Gauhati University, Guwahati, for her valued guidance and assistance and constant encouragement throughout the period of this research. Her patience, support and unwavering confidence in me have been priceless pillars in my endeavour, without which this work could not have materialized. Over the years I have gained much from her knowledge, wisdom and vast experience and, I greatly admire her skill and clarity of thinking. To follow her is not easy but to do so is an honour. I shall forever remain indebted to her.

I offer my gratitude to Prof. K.K.Das, Head, and all other faculty members, especially, Dr. H.K.Baruah and Dr. L.Choudhury of the Department of Statistics, Gauhati University, for the interest shown and help offered to me during the course of this research work.

I would be failing in my duties if I do not acknowledge the valuable suggestions and cooperation provided to me by Prof. Sarat Ch. Kakoty, Department of Statistics, Dibrugarh University and Dr. Amit Choudhury, Department of Statistics, Gauhati University, in the preparation of my thesis.
I acknowledge the help provided by the University Grants Commission, Government of India, by granting me leave under the “Faculty Improvement Scheme” for completing my work. I am also grateful to the Principal, K.C.Das Commerce College, and my colleagues for their support and encouragement.

I am grateful to the Principal, Gauhati Medical College and Hospital, for granting me the permission to use the data available in the Department of Psychiatry of the Institution, for my study. My sincere thanks are also due to the faculty members of the Department of Psychiatry, GMCH, for their help and support in conducting the Sensitivity-Specificity test of the Schedule prepared for the study.

My interest on mental illnesses and the motivation to work on Major Depressive Disorder from a statistical perspective came from the awareness I gathered, over the years, from my husband, Dr. H.R.Phookun, Professor and Head, Department of Psychiatry, Gauhati Medical College and Hospital, Guwahati. I would like to express my sincere gratefulness to him for his immense help, guidance, inspiration and moral support in this long sojourn. Truly, this work would not have seen the light of the day without him.

I am grateful to my brother-in-law Mr. Sreemant Phukan for his immense help, advice and encouragement throughout the course of this work. To him I am indebted not only for his enormous help but also for setting the example that nothing but the best efforts would suffice. I offer my heartfelt gratitude for his contribution which has been so important in the preparation of this thesis.

On a more personal note, I cannot but acknowledge the active interest and help offered by my sister Dr. Sangeeta Barthakur and my brother Dr. Devasish Barthakur in this endeavour of mine. They remained the backbone to everything I did and provided the encouragement and understanding so essential in these days of rising stress.
I also offer my deep regards to Dr. S.N. Sarmah, Retired Principal, Goalpara College, Assam, for his genuine concern and support in this pursuit.

My mother has been my pillar of strength from the days of my living memory till today. Her love and blessings have been a great source of inspiration to me.

I am highly grateful to all my relatives, especially Mr. J.R. Phookun, Arupa, Meenakshi and Devajyoti for their constant encouragement and support and for being with me in this long journey. I acknowledge their many virtues with much love. I would also like to remember my mother-in-law, who could not see the completion of my thesis, for her loving support in my work.

My daughters Amrita and Archita deserve special thanks for the many little, yet precious, contributions they have made during these arduous years.

My doctoral research was a beautiful dream cherished by my father, late B. N. Sarma Barthakur, whose love and inspiration made me what I am today. It is most unfortunate that this dream could not be fulfilled during his lifetime. I fondly dedicate this work to his omnipresent memory.

(Runjun Phookun)
