ACKNOWLEDGEMENT

CONTENTS

List of Tables

List of Figures

1 Introduction 1 - 35

1.1 General introduction 1

1.2 Aims and objectives of the study 10

1.3 Plan of the thesis 11

1.4 Review of literature 15

1.5 Mathematical tools used 28

2 An epidemiological study of major depressive disorder 36-51

2.1 Introduction 36

2.2 A Glimpse of the World Epidemiology of MDD 37

2.3 Results of Epidemiological Study of Depression from the Collected Data 39

2.4 Data analysis 46

2.5 Conclusion 51

3 Impact of Socio-demographic Variables on Major Depressive Disorder: A Regression Analysis 52-87

3.1 Introduction 52
3.1.1 The Socio-demographic Variables Effecting Major Depressive Disorder: A Multiple Linear Regression Analysis

3.1.2 Materials and methods

3.1.3 Multiple Linear Regression Analysis: using real life data

3.2 The Socio-demographic Variables Affecting the Degree of Severity of MDD: An Ordinal Logistic Regression Analysis

3.2.1 Introduction

3.2.2 Materials and method

3.2.3 Ordinal Logistic Regression Analysis: using real life data

4 Estimation of odds and indices of diagnostic tests in depression: Applications of Bayes’ theorem.

4.1 Introduction

4.2 Materials and methods

4.3 Bayesian analysis: Using real life data

4.4 Diagnostic test evaluation

4.5 Conclusion

5 Probabilistic analysis of depressive episodes: Renewal Theoretic approach

5.1 Introduction

5.2 Materials and methods

5.3 Depressive episodes as a renewal process

5.4 Constant hazard rate constant hazard rate

5.5 Linearly increasing hazard rate

5.6 Hazard rate of distributions which have both IHR and DHR properties
6 Occurrence and Recovery of Depressive Episodes: An alternating renewal process

6.1 Introduction

6.2 Materials and methods

6.3 Case (I)

6.4 The Renewal Process

6.5 Expected number of renewals of the process \( \{N_0(t), t \geq 0\} \)

6.6 Case II.

6.7 Expected number of renewals of the process \( \{N_1(t), t \geq 0\} \)

6.8 The occurrence rate and recovery rate of depression are taken as same for case (I)

6.9 If the occurrence rate and recovery rate of depression are taken as same for case (II)

6.10 Comparison of Hazard Rates and Expected Number of Renewals for Case (I) and case (II)

6.11 Discussion

6.12 Some special cases

7 Cause Specific Occurrences of Depressive Episodes

7.1 Introduction

7.2 Materials and methods

7.3 When the doctor finds the patient to be under the influence of either of the causes \( A_1 \) or \( A_2 \).

7.3.1 Hazard rate of time

7.3.2 Range of time
7.4 Renewal Process corresponding to $W(t)$

7.4.1 Both the causes affecting the patient with constant hazard rate

7.4.2 Both the causes affecting the patient with linearly increasing hazard rate.

7.4.3 Both the causes affecting the patient with hazard rates valid in a range depending on parameters

7.4.4 One of the causes affecting the patient with constant hazard rate other with the range depending on parameter

7.5 Discussion:

8 Cause specific depression: Joint effect of simultaneous Occurrence of two causes

8.1 Introduction

8.2 Materials and methods

8.3 Characteristics obtained under various joint dist of X & Y

8.4 Special case

8.5 Joint distribution of X and Y

8.5.1 Conditions for deriving the influencing parameters

8.6 Numerical example

8.7 Discussion

9 Conclusion and Future Scope of Work

9.1 Conclusion

9.2 Future scope of work
