List of Figures

1. Elution profile of MBSA-DNM from the Sephadex G-50 column ............................................. 37
2. Anodic mobility in agarose gel electrophoresis at pH 8.4 as detected by Coomassie blue staining. A. BSA; B. MBSA; C. MBSA-DNM ....................................................... 38
3. Absorbance spectrum of DNM between 200–600 nm. in Du–7 spectrophotometer ................................. 40
4. Absorbance spectrum of MBSA between 200–600 nm. in Du–7 spectrophotometer................................. 41
5. Absorbance spectrum of MBSA-DNM between 200–600 nm. in Du–7 spectrophotometer ......................................................... 42
6. Binding of different concentrations of $^{125}$I-MBSA-DNM by J774A.1 cells at 4°C ............................... 43
7. Effect of MBSA and DNM on $^{125}$I-MBSA-DNM binding by J774A.1 cells at 4°C ......................... 44
8. Relationship between the concentration of $^{125}$I-MBSA-DNM and the extent of uptake (panel a) or degradation (panel b) of MBSA-DNM by J774A.1 cells ......................................................... 46
9. Effect of monensin (3 μM) on the rate of accumulation and degradation of $^{125}$I-MBSA-DNM ......................................................... 47
10. Accumulation and degradation of $^{125}$I-MBSA-DNM at 37°C previously bound to J774A.1 tumor cells at 4°C ......................................................... 48
11. Effect of different concentrations of MBSA-DNM or MBSA on the degradation of $^{125}$I-MBSA-DNM by J774A.1 cells at 37°C ......................................................... 50
LIST OF FIGURES

12 Degradation of $^{125}$I-MBSA-DNM by cell lines of macrophage and non-macrophage origin. .......................................................... 51

13 $^3$H-thymidine incorporation by J774A.1 cells at varying periods of time after drug exposure. .......................................................... 53

14 Ability of MBSA-DNM treated tumor cells to form monolayer in culture. 55

15 Incorporation of $^3$H-thymidine by J774A.1 and Bowes melanoma cells in presence of DNM in free (panel a) or conjugated form (panel b). 57

16 Survival of BALB/C mice after transplantation of J774A.1 tumor cells. 58

17 Development of tumor in BALB/C mice after transplantation of drug treated cells.a. untreated; b. control; c. DNM; d. MBSA-DNM. . . 59

18 Binding of $^{125}$I-MBSA-DNM by J774A.1 and JD-100 cells at 4°C. . . 62

19 Degradation of $^{125}$I-MBSA-DNM by J774A.1 and JD-100 cells at 37°C. 63

20 Accumulation and degradation of $^{125}$I-MBSA-DNM at 37°C previously bound to JD-100 cells at 4°C. ................................. 65

21 Effect of different concentrations of MBSA-DNM and DNM on the $^3$H-thymidine incorporation by JD-100 cells at 37°C. 66

22 Time course of cytotoxic action of DNM in free or conjugated form on JD-100 cells. ................................................................. 67

23 Time course of clearance of intravenously injected $^{125}$I-MBSA-DNM from the blood of BALB/C mice. ................................. 69

24 Tissue distribution of intravenously injected $^{125}$I-MBSA-DNM in BALB/C mice. ................................................................. 70

25 Suppression of tumor growth in BALB/C mice by different doses of DNM and MBSA-DNM. ............................................................. 71

26 Suppression of the tumor growth in BALB/C mice by different doses of DNM and MBSA-DNM. ............................................................. 72

27 Effect of MBSA-DNM and DNM on the growth of J774A.1 tumors in BALB/C mice. ............................................................. 74

28 Treatment of J774A.1 tumors in BALB/C mice with single administration (50 µg) of DNM in free and conjugated form. ............... 75
LIST OF FIGURES

29  Effect of MBSA-DNM and DNM on the suppression of preformed tumors in BALB/C mice. 76
