CONTENTS

I INTRODUCTION. 1
II REVIEW OF LITERATURE. 8
III MATERIALS AND METHODS. 21
IV EXPERIMENTAL RESULTS.

A. Manuring and spacing experiment.

1. Plant development characters.
   (i) Height of the main stem. 32
   (ii) Periodic growth in height. 34
   (iii) Length of internodes. 36
   (iv) Thickness of stem. 38
   (v) Number of leaves per plant. 40
   (vi) Leaf area. 41
   (vii) Tasseling period. 43
   (viii) Silking period. 45
   (ix) Height of ear on the stalk. 47

2. Incidence of borer attack. 49

3. Percentage of barren plants. 51

4. Root development.
   (i) Number of prop roots. 53
   (ii) Weight of roots up to 6 inches depth. 54
   (iii) Lodging percentage. 56

5. Ear development.
   (i) Weight of the ear. 59
   (ii) Circumference of the ear. 60
   (iii) Length of the ear. 62
   (iv) Number of grain rows per ear. 64
   (v) Number of grains per row. 65
   (vi) Weight of grains per ear. 67
   (vii) Number of ears per plant. 68

   (i) Kernel weight. 71
   (ii) Shelling percentage. 73
   (iii) Protein content of grains. 75

7. Percentage stand. 77

8. Yield per acre.
   (i) Grain. 79
   (ii) Stalks. 81

   (i) Yield of wheat grain per acre. 84
   (ii) Yield of wheat straw per acre. 85
10. Economics of manuring. 87
11. Correlation studies. 88

B. Optimum seeding time.
   (i) Height of the main stem. 93
   (ii) Girth of the stem. 94
   (iii) Percentage borer attack. 94
   (iv) Percentage of barren plants. 94
   (v) Shelling percentage. 94
   (vi) Yield of grain and stalks. 96

C. Relative efficiency of organic and inorganic fertilizers.
   (i) Height of the main stem. 100
   (ii) Girth of the stem. 100
   (iii) Percentage borer attack. 101
   (iv) Percentage of barren plants. 101
   (v) Shelling percentage. 101
   (vi) Yield of grain and stalks. 103

V DISCUSSION. 105
VI SUMMARY. 121
VII LITERATURE CITED. 127
VIII APPENDICES. 133
