ACKNOWLEDGEMENTS

It is my privilege to recall with pride that in the scholarly self of Dr. G.P. Sharma, M.Sc. (Hons.), Ph.D. (Pb.), Ph.D. (Edin.), F.A.Z., F.L.A.Z., F.Z.S., F.Z.S. I., F.R.N.S., F.N.A.Sc., F.N.A., Professor in the Department of Zoology, Panjab University, Chandigarh, I found a teacher the image of whom I had ever dreamt. I am most fortunate to have been one of his students whom he has so profusely blessed on more than one occasion. I feel deeply indebted to his able and esteemed self whose kindness helped me in executing the present project undertaken by me under his most competent, proficient and benevolent guidance. The inspiration drawn from his dynamic personality, academic qualities and great many virtues has been a source of great security to me and which will, I hope, illuminate my path of learning in future. My reverence for Dr. Sharma is also due to the fact that he so gladly agreed to go through the dry and dreary job of screening the manuscript so promptly and efficiently as seems miraculous, especially when he had hardly any spare moments from his ever busy schedule. I must say, it is all because of his intent affections for his students that he gives preference to their work and welfare beyond all other considerations whenever they approach his for the purpose. It is only his great person that graced the present manuscript by giving it the final touches and necessary shape.

It is my profound pleasure to feel indebted to Dr. H.S. Vasisht, M.Sc. (Hons.), Ph.D. (Pb.), Chairman, Department of Zoology, Panjab University, Chandigarh, who so very kindly provided to me the best possible laboratory
facilities and other necessary help pertaining to my research project. I feel it a matter of pride to acknowledge that I being one of his old students received the maximum favour from his kindself and hope to continue doing so in the times to come.

I am deeply appreciative and grateful to Dr. Sudarshan Chaudhry, M.Sc. (Hons.), Ph.D. (Ph.), Lecturer in Zoology, for his frank opinion, whole-hearted co-operation and learned advice besides lending me the most valuable literature concerning the present project.

I really miss words to phrase my reverence and respect for Dr. K.K. Tandon, M.Sc. (Hons.), Ph.D. (Ph.), Reader, who not only advised and allowed me to go ahead in pursuing the present endeavour, but also kept a constant and careful watch on my well being.

My special thanks are due to Dr. M.R. Rajasekarasetty, Professor and Head, Department of Zoology, Mysore, for providing to me generously the laboratory facilities and also for taking personal care that I carried out the research there under the best possible conditions. I am also indebted to Dr. K. Gopinath of the same department for identifying the mosquito species available in the vicinity. He was cordial and accommodating throughout my stay in Mysore.

I wish to acknowledge gratefully the geniality of Dr. R.N. Chowdaiah, Reader in Zoology, Central College Bangalore, for permitting me rather happily to work in his laboratory. I must record my unbounded gratitude for his help to me whenever I approached him with any genuine difficulty.
I gratefully acknowledge the help and co-operation extended by Sh. Nagahvir Rao, Senior Entomologist, Communicable Disease cum Training Centre, Mandya (Karnataka) in identifying the species of mosquito available there.

I take delight in recording my permanent gratitude to Dr. B.K. Behura, Professor and Head, Department of Zoology, Utkal University, Bhubaneswar (Orissa) for placing at my disposal the special laboratory facilities so that I could carry out my research there in Orissa so very successfully.

My thanks are also due to Mr. N.L. Kalra, Assistant Director (Entomology), N.M.E.P., Delhi, who obliged me by identifying some of the mosquito species.

Mr. Bhagvan Dass, our Laboratory attendant has to be thanked individually for accompanying me into Mysore and Orissa and suffering with me the toil and sweat of field excursions which sometimes extended to many miles.

Mr. P.C. Sharma, Photographer of the department may be thanked rather whole-heartedly for the quality of photographs and other relevant help extended to me.

It is not so easy always to express one's deepest appreciation and admiration to the scores of friends and well wishers whose unflagging morale boosting and spiritual succour have ever been behind the compilation and completion of the present manuscript.

The warmest ever affections, tender feelings, sense of belonging, silent blessings and constant encouragement of my parents have gone a long way in
enabling me to pursue the present line to this end. Without their consent or kindness, I might not have been able to undertake any research project whatsoever.

The author is also grateful to the University Grants Commission, New Delhi, India for partially financing this research work through Grant No. F-23-213/75, SR-II, Code No. 068/BIO.SC.75.
