ACKNOWLEDGMENT

I express a profound sense of gratitude and indebtedness to Dr V.P. Gupta, M.Sc., Ph.D., Professor of Genetics, Punjab Agricultural University, Ludhiana, for his inspiring guidance, constructive criticism and constant encouragement and supervision in the accomplishment of this research work. His help in building up the material and arranging other facilities is also gratefully acknowledged.

Grateful thanks are also due to Sardar Bishan Singh Samundri, Vice-Chancellor, Guru Nanak University, Amritsar, on whose initiative I took up this research work. His help has been a constant source of encouragement.

I am indebted to Dr K.S. Gill, Professor and Head, Department of Plant Breeding and Dr G.S. Gill, Professor and Head, Department of Agronomy, Punjab Agricultural University, Ludhiana, for providing necessary facilities. Thanks are also due to Drs S.S. Saini and M.M. Verma, Rice Breeder and Associate Professor, respectively for their critical suggestions; and to my friends, Sarvshri Hardial Singh and B.S. Dhillon for their assistance.

I cannot but mention in the end, the patience and cooperation of my wife towards the completion of this dissertation.
