ACKNOWLEDGEMENTS

I find it hard to express in words my gratitude and sincerity to my affectionate teacher, Dr. K. K. Nanda, Professor of Plant Physiology, Botany Department, Panjab University for inspiring encouragement, ablest guidance, unstinted interest in experimentation and in the preparation of this manuscript. What I am is all due to my association with him since my Honours School stage.

I express my thanks and gratitude to Dr. P. N. Mehra, Senior Professor & Head of the Botany Department, Panjab University for providing laboratory facilities.

I am indebted to Dr. A. N. Purohit, Plant Physiologist, C. P. R. I. (previously Lecturer in Botany, Panjab University Botany Department, Chandigarh), who has been a source of constant help and inspiration. But for his many useful suggestions, this work would have been impossible.

I owe my thanks to M/s V. K. Kochhar and Sudhir Sawhney for their help in making diagrams.

The financial assistance received from the U.S. Department of Agriculture in the form of research scholarship in the PL 480 research project A-7-FS-11 is gratefully acknowledged.

Date: May 31, 1969

Adarsh Bala

Botany Department, Panjab University, Chandigarh-14.
