ACKNOWLEDGEMENT

I would like to dedicate my thesis in the memory of my late Grandfather and Grandmother.

Quite a few people contributed towards the successful completion of my thesis. I would like to acknowledge them all.

I would like to thank CSIR-IGIB, for providing the platform and the infrastructure to work in a congenial and at same time competitive environment. Dr. Samir Brahmachari – director general CSIR and Dr. Rajesh Gokhale, Director, IGIB New Delhi, deserves credit for allowing me to carry out my work at the institute and offering world class facilities and environment for assistance.

One person whose contributions I cannot undermine would be my supervisor and guide Dr. Anurag Agrawal. But for his able guidance and timely supervision I could never have completed or reached anywhere I have, in contributing to science for the welfare of humanity at large. His scientific outlook and clarity of thought helps one in good stead. Sessions and deliberations with Dr. Anurag have always been extremely enriching for me, courtesy his acumen and knowledge in varied fields be it biology, medicine, engineering, mathematics, statistics, principles or life. Few people are as open to new ideas as is Dr. Anurag. I feel I was extremely fortunate to have had is tutelage during my tenure.

Dr. Balaram Ghosh also had significant hand in shaping my outlook and temperament. His ideologies and experience has helped me stand testing times during my PhD. He was always there for discussion and valuable advice whenever I required them. His passion and dedication towards science is worth a special mention.

Other scientists in CSIR-IGIB names of which include Dr. Kausik, Dr. Mitali, Dr. Arijit, Dr. Souvik, Dr. Sreedhar and Dr. Beena have also stimulated me with scientific thoughts and ideals from time to time.

My gratitude goes to Dr. S.K. Kabra and Dr. Rakesh Lodha at Chest Pediatrics, AIIMS for being meticulous and generous collaborators for my study. Most of the samples have come from
our collaboration. They have done a commendable job maintaining all records and details of every patient enrolled. Without their help my thesis could never have been completed.

CSIR-IICB, Kolkata (Collaborator) was instrumental in shaping my thesis. I performed the NMR experiment at their central NMR facility with the kind permission of the director Dr. Siddhartha Roy. His help and knowledge helped me gain insights into Nuclear Magnetic Resonance Spectroscopy which had been relatively new for me.

My seniors in the lab had been exemplary. Their guidance and timely help assisted me learn newer things and develop good sense of lab practices. Dr. Rajan, Dr. Naveen, Dr. Jyotirmoi Aich, Dr. Amit Sharma, Dr. Manish, Dr. Kamiya Mehla, Sudipta, Dr Amarendra warrants a special mention.

My initial work in the laboratory started with Dr. Jyotirmoi Aich. She had been extremely patient and helpful in guiding me through the initial stages.

Dr. Manish had been guiding me throughout, even at odd hours and making us laugh with his unique set of pranks.

Next in line would be my peers and juniors in the lab. Suchita, Ankur, Tanveer, Lokesh, Kritika, Vaibhav, Vinny, Rituparna, Bijay, Shrvani, Rakshinda, Lipsa, Swati, Sulagna, Divya, Adarsh, Atish, Puneet and others have made my journey eventful and memorable. All my lab members were extremely kind and cooperative in offering their precious breath samples for my work.

Ankur has been a good friend since M.Sc and had been of major help in shaping the exosome story.

Suchita has been like my elder sister correcting me every now and then.

Tanveer had been my colleague and partner in our non-veg food pursuits in the narrow alleys of chawri bazaar. He had been my fitness inspiration too.

A special note of thanks to Vinny for always retrieving papers that was difficult to access otherwise, from her unique repository.
Samarpana and Kunal have been close friends and confidante, apart from being co-workers. We worked together on many occasions. Kunal’s scientific outlook along with Samarpana’s precision and perseverance deserves accolade. A special thanks to Samarpana and Parul (my trainee) for being available at odd hours to assist me in my work.

Shravani had always been extremely accessible offering help. We share our love for fishes and Bengali cuisine and culture.

Tea sessions with Atish, Puneet, Samarpana, Kunal, Parul, Neharika and Koundinya had been refreshing and stimulating at the same time.

Amit Yadav and Pramod deserve credit for timely help and advice.

I have special memories with my senior Bharat sir. My trip to Germany would not have been possible without his help.

Sunil our laboratory attendant deserves a mention for his dedicated service in the lab and arranging all consumables to be used by the students.

My PhD. batch mates have been instrumental in being cooperative and offering help. The list includes Aastha, Rishi, Ankur, Kunal, Hemant, Rajpal, Dilip, Prerna, and Kirandeep.

I have fond memories of my roommate Sagar with whom I started my culinary expeditions at our room. We helped each other preparing delectable dishes to keep healthy.

We have a good and able machine learning team boasting of Koundinya, who is a good friend, Rintu, under the mentorship of Tavpritesh, in our lab. I cannot but acknowledge their valuable contributions in shaping my work. They helped me with the machine learning part in writing the codes and developing the model.

Dr. Tavpritesh has always been well-wisher and helped me throughout. His outlook and passion fascinated me towards translational research at the interface of mathematics, physics, biology and engineering. His diligence in his work is praiseworthy. My Ph.D work started learning pulmonary function tests, Spirometry and Impulse Oscillometry from him. His thirst for knowledge is an inspiration for one and all.
Tavpritesh, Samarpana, Rituparna and Kritika and had been kind enough to patiently read through my thesis chapters and suggest improvements.

I acknowledge ‘R’ programming for helping me in the analysis and generation of most of the plots and figures in my thesis.

I would also like to acknowledge Sunny who helped me format my thesis.

My words fall short expressing my gratitude for my parents who though had been away from me physically but whose constant love, care and guidance helped me sustain the long learning years in my PhD. All my relatives have played their part however small and I acknowledge all for being by my side.

Last but not the least, I thank all the members of IGIB administrative staff and IT department for offering invaluable timely service and assistance.
