ACKNOWLEDGEMENTS

A Ph.D. is not a work in isolation. It involves a lot of encouragement and help from many people, sometimes even unknowingly.

I am extremely privileged to have worked with Dr. Debasis Dash as my advisor. He provides freedom and poses faith in his students that lead not only to academic growth but helps develop many leadership qualities for future. With his sound logic, scientific acumen and interactive skills, he lets the students discover things for themselves. He deeply believes in inculcating leadership qualities in the students. There is a lot to learn from his subtle yet effective mentoring style.

I thank Prof. S.K. Brahmachari for providing me the opportunity to work at IGIB and instilling interest in computational biology while I was inclined towards wet lab work. Dr. Anurag Agrawal and Dr. Shantanu Sengupta have also fostered my growth and development during these formative years. I thank Dr. Rajesh Gokhale and Alzu Manocha for providing the data from which I learnt nuances of mass spectrometry data analysis and developed MassWiz from that experience. I also thank Dr. Eugene Kolker for providing access to SC-200 mix data set. I thank Dr. Gokhale for instilling a new spirit of scientific excellence in IGIB after he joined as director.

I appreciate the unconditioned love and support of my dear friends Anand Pushker, Ritu Pandey, Nupur Mondal, Pritam Kaur, Meenakshi Bansiwal, Ratnesh Mishra, Niti Chauhan, Pradeep Kumar, Rashmi Saini and many others I forgot to mention here. It never felt that there was any disconnect even though we could converse very little during the last few years.

I thank CSIR for JRF and SRF fellowships, which took care of most financial needs.

I thank Nitin Kumar Singh, Dr. Vinod Scaria, Dr. Manoj Harihara, Pramod Gautam, Amit Mandal, Vikram Kumar, Pallavi Sarmah, Vinod Yadav, Sandeep Grover and many others who made my transition into research a lot easier than it would have been and remain available for friendly advice and discussions even today.

I thank Dr. G. P. Singh for great friendly guidance from time to time and showing me how to have fun with science. His genuine curiosity and attitude towards asking even the seemingly inane questions prepared him a scientist in the truest sense.
I thank my friends and Ph.D. batch-mates without whom the journey would not have been as enjoyable – Sriyans Jain, Ganesh Chauhan, Sudipta Das, Richa Singh, Tani Agarwal, Rajpal Srivastav and Rangeetha Naik. I will always remember fondly the cakes, lunches and dinners we relished together along with the scientific and philosophical discussions. Sriyans is like Rahul Dravid- unassuming, no-fuss, going about his business, and always standing up for you when needed. He is affectionately called our smiley-for he just could never stop smiling. Sudipta, the charming bubbly, foodie to the core of her heart, was much more than that if you got a chance to discuss life. Her perseverance and extreme focus facilitated her PhD submission before some of our “smart” batch mates could. Richa, the drama queen, makes our get together lively and memorable. Had she not been with us, we would not have explored so many eating outlets and interesting places. She has the great quality of being undaunted to do the things she believes in. Rajpal is the understanding friend, tireless worker and self-motivated researcher. Besides his qualities, his cravings for non-vegetarian food also lead us to places which vegetarians like me could enjoy. Ganesh is the listener and sound bag of our group. Bring your problems and he will listen calmly. He is always game for trying new things- be it food, places to travel or any new ventures. Rangeetha, the smiling persona has a resolute but calm character inside her. Never bothered or perturbed by any turn of events, she knows her goals, prepares well and works hard to achieve them. Tani is the daredevil of the group who would never shy away from any challenge or problem. Methodical and precise, she will discuss and sort any problem within a short time.

Many IT division friends - Ashish Kumar Singh, Anurag Pathak, Rahul Sarswat, Deepak Kumar, M.V. Raghunandanan and Vikas Pandey have extended great help and I owe a lot of my success to these people who keep working behind the scenes.

I thank the trainees Smriti Bhatnagar, Reena Sharma, Smiti Saswati Sahoo and Payal Mahanjan from whom I learnt a lot about mentees, learning and mentorship.

There are many friends with whom I have worked and shared a large part of my PhD life. Dhirendra Kumar, Sangeeta Khanna and Punit Kumar Kadimi have worked and helped me tackle challenging problems. Without them Ph.D. would be more difficult to complete. My lab-mates (both present and past) Rishi Das Roy, Meenakshi Anurag, Ankita Narang and Anupam Kumar Mondal, Vimal Rawat, Manjari Sinha, Gourja Bansal have always been a constant source of fun, entertainment and encouragement.
Due to combined labs and extended friend circles, I had the privilege of interacting, working and sharing thoughts with Dr. V. Sabareesh, Dr. Rajesh Pandey, Rajni Verma, Dr. Yasha Hasija, Dr. Tavpritesh Sethi, Bhanwar Puniya, Jyotsna, Chaitali Paul, Srikant Verma, Shreya Chakraborty, Amit Chaurasia, Trayambak Basak, Dr. Gaurav Garg, Gaurav Bhardwaj, Ruchi Baghel, Dr. Meenal Gupta, Dr. Gunjan Arora, Preeti Aahir, Anirban Sinha, Smitha Nair and Rupanjali Chaudhuri. My metro rides back home were usually enriched by some thoughtful discussions and fun filled conversations with Harpreet Kaur and Ajay Jajodia. Gunjan and Harpreet helped in proof-read the thesis while few others also helped finalize this thesis, albeit after threatening.

Thanks to my parents, for always being in the background but working hardest for my success. Words cannot explain my gratitude and their contribution.

So many people have influenced my life, beliefs and growth that I find it near impossible to mention and pen down every name without forgetting some. People who matter to me know their place in my life irrespective of whether they are named in this acknowledgement. They are no less significant than the ones mentioned here.

Thanks goes to Google Scholar and Pubmed for letting me stand on the shoulder of giants. Lastly, I thank the educators on the internet who take all the pains to teach people like me through videos, blogs, personal accounts and tutorials. I will try to contribute too by passing on whatever little knowledge I have gained.

(Amit Kumar Yadav)
