# Contents

1 Introduction .................................................. 1

1.1 Historical background .................................. 2

1.2 Bohr's theory ............................................. 4

1.2.1 Natural broadening (Radiation damping) .......... 5

1.2.2 Thermal broadening (Doppler broadening) .......... 5

1.2.3 Combination of profiles (The Voigt profile) ..... 5

1.3 Angular momentum and parity of an atomic energy level ..... 6

1.4 Spectropolarimetry ........................................ 7

1.5 Scope of the thesis ....................................... 10

2 Energy Levels of an Atom in an Arbitrary External Electric Field 15

2.1 Introduction ............................................. 15

2.2 Interaction of an atom with an arbitrary charge distribution ..... 16

2.3 Level splitting of an atom with spin \( J = 1 \) ........... 21

2.3.1 Dependence of level splitting on the asymmetry parameter \( \eta \) 22
2.4  Level splitting of an atom with spin $J = 3/2$  

3  Energy Levels of an Atom in Combined External Electric and Magnetic Fields  

3.1  Introduction  

3.2  The case of $J = 1$  

3.2.1  Magnetic field $B$ along the $Z$-axis of PAF  

3.2.2  Magnetic field $B$ along the $X$-axis of PAF  

3.2.3  Magnetic field $B$ along the $Y$-axis of PAF  

3.2.4  Arbitrary orientation of $B$ with respect to the PAF  

3.3  The case of $J = 3/2$  

3.3.1  Magnetic field $B$ along the $Z$-axis of PAF  

3.3.2  Magnetic field $B$ along the $X$-axis of PAF  

3.3.3  Magnetic field $B$ along the $Y$-axis of PAF  

3.3.4  Arbitrary orientation of $B$ with respect to the PAF  

4  Atomic Polarization  

4.1  Introduction  

4.2  Atomic polarization for $J = 1$  

4.3  Atomic polarization for $J = 3/2$  

4.4  Atomic polarization in the combined presence of electric quadrupole and uniform magnetic fields
5 Polarization of Radiation

5.1 Introduction ......................................................... 56
5.2 Radiation in the Coulomb gauge .................................... 57
5.3 Polarization states of radiation .................................... 58
5.4 Density matrix formalism for radiation .............................. 60
5.5 The relation between Stokes parameters and polarized radiation field tensors ........................................... 61
5.6 Multipole states of the radiation field ............................... 62
5.7 Quantum field .......................................................... 63

6 General Theory of the Emitted Line Polarization by an Atom in the Presence of External Fields

6.1 Introduction ............................................................ 67
6.2 General theory of the line polarization when both the upper and lower atomic levels are split by the presence of external fields .......... 69
6.3 Special case \( J_u = 1, J_l = 0 \) ..................................... 73
6.4 Zeeman terms and Cross terms ...................................... 73
6.5 Polarization of emitted lines in \( J = 1 \) to \( J = 0 \) transition ........ 76
   6.5.1 Polarization density matrix for radiation ..................... 76
   6.5.2 Stokes line profiles formed in the presence of a pure magnetic field .............................................. 78
