Figure 2.10. Micrograph of abaca fiber surface morphology: (a) unmodified (b) plant system digestion (NDS) modified and (c) fibrillation

Figure 2.11. SEM micrographs of: (a) bacterial cellulose-modified sisal (b) acetone-treated and bacterial cellulose-modified sisal fibers and the corresponding CAB matrix cavities after single fiber pull-out testing

Figure 2.12. Single fiber pullout results for hemp and sisal fibers in CAB matrix (&) plant sisal fiber (Sisal-N) (*) sisal fiber modified with bacterial cellulose (Sisal-NBC) (^) plant hemp fiber (Hemp-N) (~) hemp fiber modified with bacterial cellulose (Hemp-NBC)

Figure 2.13. SEM of 50 % jute fiber/PP composites

Figure 2.14. SEM of 50 wt % of wood powder within PP. The wood powder is circled

Figure 2.15. SEM of ramie fibers: (a) control (b) plasma treated for 24 s with ethanol pretreatment

Figure 2.16. SEM images of: (a) untreated wool (b) C2F6 plasma treated wool; (c) O2 plasma treated wool (d) untreated cotton (e) C2F6 plasma treated cotton (f) O2 plasma treated cotton

Figure 2.17. Surface roughness of different plasma gases treated wool (left) and cotton (right)

CHAPTER – 3

Figure 3.1. Bacteria and fungi: (a) *Brevibacillus Parabrevis* (b) *Streptomyces albaduncus* (c) *Phanerochete chrysosporium* (d) *Trichoderma reesei* (e) *Escherichia coli* (f) *Staphylococcus aureus*

CHAPTER – 4

Figure 4.1. Effect of carbon sources on cellulase activity: (a) *Brevibacillus parabrevis* cellulase (b) *Streptomyces albaduncus* cellulase

Figure 4.2. Effect of nitrogen sources on cellulase activity: (a) *Brevibacillus parabrevis* cellulase (b) *Streptomyces albaduncus* cellulase

Figure 4.3. Effect of pH on cellulase activity: (a) *Brevibacillus parabrevis* cellulase (b) *Streptomyces albaduncus* cellulase

Figure 4.4. Effect of temperature on cellulase activity: (a) *Brevibacillus parabrevis* cellulase (b) *Streptomyces albaduncus* cellulase
**Figure 4.5.** Effect of time period on cellulase activity: (a) *Brevibacillus parabrevis* cellulase (b) *Streptomyces albaduncus* cellulase

**Figure 4.6.** Effect of carbon sources on cellulase activity: (a) *Phanerochaete chrysosporium* cellulase (b) *Trichoderma reesei* cellulase

**Figure 4.7.** Effect of nitrogen sources on cellulase activity: (a) *Phanerochaete chrysosporium* cellulase (b) *Trichoderma reesei* cellulase

**Figure 4.8.** Effect of pH on cellulase activity: (a) *Phanerochaete chrysosporium* cellulase (b) *Trichoderma reesei* cellulase

**Figure 4.9.** Effect of temperature on cellulase activity: (a) *Phanerochaete chrysosporium* cellulase (b) *Trichoderma reesei* cellulase

**Figure 4.10.** Effect of time period on cellulase activity: (a) *Phanerochaete chrysosporium* cellulase (b) *Trichoderma reesei* cellulase

**Figure 4.11.** SEM of ramie fibers: (a) Raw ramie fiber (b) RB-01 (c) RB-02 (d) RB-03 (e) RB-04 (f) RB-05

**Figure 4.12.** SEM of ramie fibers: (a) Raw ramie fiber (b) RS-01 (c) RS-02 (d) RS-03 (e) RS-04 (f) RS-05

**Figure 4.13.** XRD of raw and cellulase (*Brevibacillus parabrevis*) treated ramie fibers

**Figure 4.14.** XRD of raw and cellulase (*Streptomyces albaduncus*) treated ramie fibers

**Figure 4.15.** SEM of ramie fibers: (a) Raw ramie fiber (b) RP-01 (c) RP-02 (d) RP-03 (e) RP-04 (f) RP-05

**Figure 4.16.** SEM of ramie fibers: (a) Raw ramie fiber (b) RT-01 (c) RT-02 (d) RT-03 (e) RT-04 (f) RT-05

**Figure 4.17.** XRD of raw and cellulase (*Phanerochaete chrysosporium*) treated ramie fibers

**Figure 4.18.** XRD of raw and cellulase (*Trichoderma reesei*) treated ramie fibers

**Figure 4.19.** TGA of raw and cellulase (*Brevibacillus parabrevis*) treated ramie fibers

**Figure 4.20.** TGA of raw and cellulase (*Streptomyces albaduncus*) treated ramie fibers

**Figure 4.21.** Moisture absorption studies of raw and cellulase (*Brevibacillus parabrevis*) treated ramie fibers at: (a)
Moisture absorption studies of raw and cellulase (*Streptomyces albaduncus*) treated ramie fibers at: (a) 55% RH (b) 75% RH

Figure 4.22.

TGA of raw and cellulase (*Phanerochaete chrysosporium*) treated ramie fibers

Figure 4.23.

TGA of raw and cellulase (*Trichoderma reesei*) treated ramie fibers

Figure 4.24.

Moisture absorption studies of raw and cellulase (*Phanerochaete chrysosporium*) treated ramie fibers at: (a) 55% RH (b) 75% RH

Figure 4.25.

Moisture absorption studies of raw and cellulase (*Trichoderma reesei*) treated ramie fibers at: (a) 55% RH (b) 75% RH

CHAPTER – 5

Figure 5.1. Molecular structures of natural phenols: (a) PCA (b) FA (c) SA (d) EG

Figure 5.2. Optimization of phenol concentration: (a) PCA (b) FA (c) EG (d) SA

Figure 5.3. Optimization of laccase concentration for: (a) CF-g-PCA (b) CF-g-FA (c) CF-g-EG (d) CF-g-SA

Figure 5.4. Optimization of incubation period for: (a) CF-g-PCA (b) CF-g-FA (c) CF-g-EG (d) CF-g-SA

Figure 5.5. FTIR spectra of raw and PCA biografted coconut fibers

Figure 5.6. FTIR spectra of raw and FA biografted coconut fibers

Figure 5.7. FTIR spectra of raw and EG biografted coconut fibers

Figure 5.8. FTIR spectra of raw and SA biografted coconut fibers

Figure 5.9. XRD of raw and: (a) PCA biografted fibers (b) FA biografted fibers (c) EG biografted fibers (d) SA biografted fibers

Figure 5.10. SEM of coconut fibers: (a) Raw coconut fiber (b) CF-g-PCA(1) (c) CF-g-PCA(2) (d) CF-g-PCA(3)

Figure 5.11. SEM of coconut fibers: (a) Raw coconut fiber (b) CF-g-FA(1) (c) CF-g-FA(2) (d) CF-g-FA(3)

Figure 5.12. SEM of coconut fibers: (a) Raw coconut fiber (b) CF-g-EG(1) (c) CF-g-EG(2) (d) CF-g-EG(3)
Figure 5.13. SEM of coconut fibers: (a) Raw coconut fiber (b) CF-g-SA(1) (c) CF-g-SA(2) (d) CF-g-SA(3)  

Figure 5.14. TGA of raw and: (a) PCA biografted (b) FA biografted (c) EG biografted (d) SA biografted  

Figure 5.15. Moisture absorption studies at 55% RH of raw coconut fibers and: (a) CF-g-PCA (b) CF-g-FA (c) CF-g-EG (d) CF-g-SA  

Figure 5.16. Moisture absorption studies at 75% RH of raw coconut fibers and: (a) CF-g-PCA (b) CF-g-FA (c) CF-g-EG (d) CF-g-SA  

CHAPTER – 6  

Figure 6.1. Antibacterial studies against E. coli: (a) Bacterial control (b) Raw coconut fibers (c) CF-g-PCA (d) CF-g-FA (e) CF-g-EG (f) CF-g-SA  

Figure 6.2. Antibacterial studies against S. aureus: (a) Bacterial control (b) Raw coconut fibers (c) CF-g-PCA (d) CF-g-FA (e) CF-g-EG (f) CF-g-SA  

Figure 6.3. Tensile load-strain curves of neat PBS, PBS+Ramie fiber and: (a) PBS+RB (b) PBS+RS (c) PBS+RP (d) PBS+RT, biocomposites with 0.5% fiber content  

Figure 6.4. Tensile load-strain curves of neat PBS, PBS+Ramie fiber and: (a) PBS+RB (b) PBS+RS (c) PBS+RP (d) PBS+RT, biocomposites with 1% fiber content  

Figure 6.5. Effect of fiber content on the tensile strength of neat PBS, PBS+ Ramie fiber and: (a) PBS+RB (b) PBS+RS (c) PBS+RP (d) PBS+RT  

Figure 6.6. Flexural load-strain curves of neat PBS, PBS+Ramie fiber and: (a) PBS+RB (b) PBS+RS (c) PBS+RP (d) PBS+RT, biocomposites with 0.5% fiber content  

Figure 6.7. Flexural load-strain curves of neat PBS, PBS+Ramie fiber and: (a) PBS+RB (b) PBS+RS (c) PBS+RP (d) PBS+RT, biocomposites with 1% fiber content  

Figure 6.8. Effect of fiber content on the flexural strength of neat PBS, PBS+Ramie fiber and: (a) PBS+RB (b) PBS+RS (c) PBS+RP (d) PBS+RT  

Figure 6.9. Tensile load-strain curves of neat PBS, PBS+Coconut fiber and: (a) PBS+CF-g-PCA (b) PBS+CF-g-FA (c) PBS+CF-g-EG (d) PBS+CF-g-SA, biocomposites with 0.5% fiber content  

Figure 6.10. Tensile load-strain curves of neat PBS, PBS+Coconut fiber and: (a) PBS+CF-g-PCA (b) PBS+CF-g-FA (c) PBS+CF-g-EG (d) PBS+CF-g-SA, biocomposites with
1% fiber content

**Figure 6.11.** Effect of fiber content on the tensile strength of neat PBS, PBS+Coconut fiber and: (a) PBS+CF-g-PCA (b) PBS+CF-g-FA (c) PBS+ CF-g-EG (d) PBS+CF-g-SA

**Figure 6.12.** Flexural load-strain curves of neat PBS, PBS+Coconut fiber and: (a) PBS+CF-g-PCA (b) PBS+CF-g-FA (c) PBS+ CF-g-EG (d) PBS+CF-g-SA, biocomposites with 0.5% fiber content

**Figure 6.13.** Flexural load-strain curves of neat PBS, PBS+Coconut fiber and: (a) PBS+CF-g-PCA (b) PBS+CF-g-FA (c) PBS+ CF-g-EG (d) PBS+CF-g-SA, biocomposites with 1% fiber content

**Figure 6.14.** Effect of fiber content on the flexural strength of neat PBS, PBS+Coconut fiber and (a) PBS+CF-g-PCA (b) PBS+CF-g-FA (c) PBS+ CF-g-EG (d) PBS+CF-g-SA

**Figure 6.15.** Fractured surface morphology of biocomposites: (a) PBS+Ramie fibers (b) PBS+RB (c) PBS+RS (d) PBS+RP (e) PBS+RT

**Figure 6.16.** Fractured surface morphology of biocomposites: (a) PBS+Coconut fibers (b) PBS+CF-g-PCA (c) PBS+CF-g-FA (d) PBS+CF-g-EG (e) PBS+CF-g-SA
