ACKNOWLEDGEMENTS

The present work was undertaken at the Maize Genetics Unit, Division of Genetics, IARI, New Delhi and CCS University, Meerut, during 2007-2010, and was successfully completed with the constant support and encouragement of many people. I take the privilege to express my sincere and heartfelt gratitude to all of them.

I am highly grateful to Dr. B. Ramesh, my internal Supervisor and Professor at the Department of Genetics and Plant Breeding, CCS University, Meerut, for his support and assistance to complete my doctoral studies at CCS University. I found him to be a very composed personality and I appreciate his timely help at several occasions during the course of the entire Ph.D. work. I am grateful for his patience and cooperation.

I express my deep sense of gratitude and heartfelt thanks to my external Supervisor, Dr. B.M. Prasanna, ICAR National Fellow & Principal Scientist, Division of Genetics, IARI, New Delhi. His guidance, patience and continuous encouragement not only led to the successful accomplishment of this research work, but also taught me the knack of carrying out research with full zest and interest. I highly appreciate the way he brought out the best I could do to pursue research in the most effective manner. I sincerely thank him for his support at all the stages of this Ph.D. programme. His insightful instructions will always be remembered.

I specially thank Dr. H.S. Balyan, Head, Department of Genetics and Plant Breeding, CCS University, Meerut, Dr. H.S. Gupta, Director, IARI, Dr. S.A. Patil, Former Director, IARI, and Dr. K.V. Prabhhu, Head, Division of Genetics, IARI, New Delhi, for their help and support in allowing me to undertake the Ph.D. programme.

This research dissertation would not have been possible without the scientific and financial support received under the ICAR National Fellow Project.
on "Molecular characterization of Indian maize landraces and allele mining for agronomically important traits", awarded to Dr. B.M. Prasanna. This provided me an opportunity to work as a Senior Research Fellow and undertake the Ph.D. work as a part of the project.

The research programme would not have been possible but for the landraces kindly provided by the farmers in the North-Eastern Himalayan region of India, especially Sikkim, to Dr. B.M. Prasanna, during germplasm exploration under the National Fellow Project. Also, I thank the Division of Germplasm Conservation, National Bureau of Plant Genetic Resources (NBPGR), New Delhi, for providing some of the landrace accessions used in this study.

I am indebted to Dr. S.K. Guleria, Maize breeder, HPKV Regional Research Station, Bajaura, Himachal Pradesh, Dr. J.C. Sekhar, Senior Scientist, DMR Maize Winter Nursery, Hyderabad, Dr. H.S. Gupta, Former Director, VPKAS, Dr. Arun Kumar, KVK In-Charge, Chinyalisaur, Uttarakhand, and Dr. Professor, Dept. of Genetics & Plant Breeding, CCS University, kind help in conducting the field trials/experiments at respective.

I am grateful to the Generation Challenge Program, especially Dr. Marilyn Warburton and Dr. Jorge Franco (CIMMYT, Mexico) for providing relevant information regarding the used in the study, and for generating and disseminating statistical soft (FreqsR and F-to-L) relevant for analysis of SSR data on maize populations.

I extend my deep sense of gratitude to Dr. Rajesh Sharma, Technical Officer, Maize Genetics Unit, for his kind cooperation, support and invaluable guidance at all stages of the work. I thank him for being very cordial and helpful during the entire work. His continuous encouragement and amiable nature made the entire programme a great experience.

I sincerely thank Dr. Firoz Hassain, Scientist, Division of Genetics, IARI, for assisting me with the phenotypic data analysis and thesis writing. His 'ready-to-
on "Molecular characterization of Indian maize landraces and allele mining for agronomically important traits", awarded to Dr. B.M. Prasanna. This provided me an opportunity to work as a Senior Research Fellow and undertake the Ph.D. work as a part of the project.

The research programme would not have been possible but for the landraces kindly provided by the farmers in the North-Eastern Himalayan region of India, especially Sikkim, to Dr. B.M. Prasanna, during germplasm exploration under the National Fellow Project. Also, I thank the Division of Germplasm Conservation, National Bureau of Plant Genetic Resources (NBPGR), New Delhi, for providing some of the landrace accessions used in this study.

I am indebted to Dr. S.K. Guleria, Maize breeder, HPKV Regional Research Station, Bajaura, Himachal Pradesh, Dr. J.C. Sekhar, Senior Scientist, DMR Maize Winter Nursery, Hyderabad, Dr. H.S. Gupta, Former Director, VPKAS, Almora, Dr. Arun Kumar, KVK In-Charge, Chinyalisaur, Uttarakhand, and Dr. B. Ramesh, Professor, Dept. of Genetics & Plant Breeding, CCS University, Meerut, for their kind help in conducting the field trials/experiments at respective locations.

I am grateful to the Generation Challenge Programme (GCP) team, especially Dr. Marilyn Warburton and Dr. Jorge Franco (former Scientists at CIMMYT, Mexico) for providing relevant information regarding the SSR markers used in the study, and for generating and disseminating statistical software (FreqsR and F-to-L) relevant for analysis of SSR data on maize populations.

I extend my deep sense of gratitude to Dr. Rajesh Sharma, Technical Officer, Maize Genetics Unit, for his kind cooperation, support and invaluable guidance at all stages of the work. I thank him for being very cordial and helpful during the entire work. His continuous encouragement and amiable nature made the entire programme a great experience.

I sincerely thank Dr. Firoz Hassain, Scientist, Division of Genetics, IARI, for assisting me with the phenotypic data analysis and thesis writing. His ready-to-
I also want to thank the supporting staff at the Maize Genetics Unit, especially Bipinderji, Ram Avtarji and Sanjay bhaiya, the administrative staff at Division of Genetics, IARI and at CCS University, Meerut for their help and cooperation. I also take this opportunity to thank all the 'ammas' at Maize Winter Nursery, Hyderabad who were a great help during the field work in Rabi season.

I extend a special note of thanks to Dr. Mamta Baunthiyal, Associate Professor, Department of Bioscience & Biotechnology, Banasthali Vidyapith. She was a great inspiration and inculcated the confidence in me that I could indeed pursue Ph.D.

Last, but not the least, my Ph.D. endeavour would not have been possible without the love, affection, care and constant support of Papa, Amma, Malti and Devesh. They had been a great source of inspiration and shared my cheers and pain with equal magnitude. Their untiring support, guidance and encouragement gave me immense strength during the entire course of my doctoral programme. I shall not miss this opportunity to thank my entire family, especially Bade papaji and Gudiya, for their immense help and support.

Many other people have rendered me help directly or indirectly during this period in several ways; although not explicitly mentioned due to constraint of space, I am grateful to each one of them.

Date: 23.01.2010
