Abstract	xv
Chapter 1 [8+2] Cycloaddition Reactions of Nitrogen Heterocycles: A Review	1-40
1.1. Introduction	1
1.2. Scope of the Review	1
1.3. Other Important Reviews Available	2
1.4. Classification	3
1.4.1. [8+2] Cycloadditions of monoazaheterocycles	4
1.4.1.1. Indolizines	4
1.4.1.2. Benzannelated indolizines	12
1.4.1.3. Azaheptafulvenes	14
1.4.1.4. Azafulvenium methides	23
1.4.1.5. Dienylazaisobenzofurans	27
1.4.2. [8+2] Cycloadditions of diazaheterocycles	28
1.4.2.1. Azaindolizines	28
1.4.2.1.1. Benzannelated azaindolizine	33
1.4.2.2. Diazafulvenium methides	33
1.4.3. [8+2] Cycloadditions of triazaheterocycles	39
1.4.3.1. Imidazo[1,2- <i>a</i>]pyrimidines	39
1.5. Conclusions	40
Chapter 2 Reaction of Imidazo[1,2-<i>a</i>]pyridines with Dimethyl Acetylenedicarboxylate: Experimental and Theoretical Results	41-95
2.1. Introduction	41
2.2. Experimental Results	42

	Page No.
2.2.1. Synthesis of 2-phenylimidazo[1,2- <i>a</i>]pyridine	42
2.2.2. Reaction of 2-phenylimidazo[1,2- <i>a</i>]pyridine in methylene chloride	49
2.2.3. Multicomponent reaction of 2-phenylimidazo[1,2- <i>a</i>]pyridine in water	56
2.3. Theoretical Investigation of the Reaction of Imidazo[1,2-<i>a</i>]pyridine with DMAD: A Stepwise Mechanism	64
2.3.1. Computational details	65
2.3.2. Results and discussion	67
2.3.2.1. Step I: Formation of the intermediate (IN ₁)	67
2.3.2.2. Step II: Two paths	87
2.3.2.3. Step III: Oxidation of IN ₂ to [8+2] cycloadduct	90
2.4. Experimental Details	91
2.5. Conclusions	95
Chapter 3 Charge-transfer Complexes of Imidazo[1,2-<i>a</i>]pyridines with Dimethyl Acetylenedicarboxylate: Experimental and Theoretical Results	96-155
3.1. Introduction	96
3.2. Charge-transfer Complexes of Pyridines and Annelated Pyridines- A Review	97
3.2.1. Preparation	98
3.2.2. Characterization and structural studies	104
3.2.2.1. Spectral studies	104
3.2.2.1.1. UV-visible spectra	104
3.2.2.1.2. IR/ Raman spectra	112
3.2.2.1.3. NMR spectra	118
3.2.2.1.4. ESI-mass spectra	122
3.2.2.2. Thermogravimetric analysis	123
3.2.2.3. X-ray studies	123
3.2.2.4. Theoretical studies	125
3.2.3. Applications	128

	Page No.
3.3. Experimental Details	131
3.4. Computational Details	133
3.5. Results and Discussion	134
3.5.1. Experimental results	134
3.5.1.1. Electronic absorption spectra	134
3.5.1.2. Spectrophotometric titration measurements	137
3.5.1.3. Formation constant (K_{CT}) and molar extinction coefficient (ϵ_{CT}) of the CT-complexes	143
3.5.2. Theoretical results	145
3.5.2.1. Ground state optimization in the gas phase	145
3.5.2.2. Determination of the CT-transition energy in the gas phase	149
3.5.2.3. Study of the FMOs of the CT- complex	151
3.6. Conclusions	155
Chapter 4 Tuning of Dienophilic Reactivity of Imidazo [1,2-<i>a</i>]pyridines: Theoretical and Experimental Results	156-219
4.1. Introduction	156
4.2. Theoretical Background	159
4.3. Computational Details	162
4.4. Results and Discussion	163
4.4.1. Theoretical results	163
4.4.1.1. Normal Electron Demand Diels- Alder reactions	163
4.4.1.1.1. Optimized geometries	164
4.4.1.1.2. Energetics	179
4.4.1.1.3. NBO analysis	186
4.4.1.1.4. FMO analysis	191
4.4.1.2. Inverse Electron Demand Diels- Alder reactions	194

	Page No.
4.4.1.2.1. Optimized geometries	194
4.4.1.2.2. Energetics	201
4.4.1.2.3. NBO analysis	206
4.4.1.2.4. FMO analysis	209
4.4.2. Diels-Alder reaction of imidazo[1,2- <i>a</i>] pyridine with tetrachloro- <i>o</i> -benzoquinone: Experimental results	211
4.5. Experimental Details	217
4.6. Conclusions	219
Chapter 5 Summary	220-246
References	247-263
Supplementary Information	264-294
List of Publications and Reprints	295-298
