6. FUTURE SCOPE

1. There are various methods available for colour reduction of edible oils but there is a need to develop a cost effective method on commercial scale for the colour reduction of the physically refined rice bran oil to increase the market value.

2. User friendly method for oryzanol extraction and purification is required to be developed from crude rice bran oil and also from bleached rice bran oil.

3. There are many by-products available in rice bran oil which needs to be explored.
