ACKNOWLEDGEMENTS

An attempt to understand what "hurried hands reveal about tangled tongues" is not easy, for the path winds through considerable uncharted territory. It would not have been possible for me to undertake this journey but for the constant support and encouragement of those clients with stuttering I saw day after day at the Institute of Speech and Hearing at Bangalore.

Fortunately for me, in my attempt to explore this area I had the exceptionally able guidance of Dr. Vinoda N. Murthy, Professor and Head, Department of Psychology, Bangalore University. She has been extremely supportive and patient. Her incisive criticism made sure that all the rough edges were smoothened out. To her I owe my heartfelt gratitude. Thank you ma'am!

Dr. S.R. Chandrasekhar, Director, Institute of Speech and Learning, Bangalore, has always been a source of inspiration. His dedication to the cause of those with speech and hearing impairments is worthy of emulation. I am indebted to him for permitting me to undertake this work.

To make sense of a string of numbers is not an easy task. Dr. Chittaranjan Andrade, Assistant Professor of Psychopharmacology, NIMHANS, Bangalore, with his brilliant guidance in the statistical analysis made everything appear so magically simple. He was always available to fall back on when I floundered.

I must thank Satheesh and Soumitra for fabricating the tapping task instrument and the bimanual handwriting apparatus. The equipment has stood the test of time.
During such explorations one always turns to someone familiar with the area. Dr. Webster was kind enough to provide me with the list of words and some very useful references that made my job that much easier. I do hope that this association is only a beginning.

There are several others who I wish to mention but the list seems endless. I must, however, mention my friends Tara, Brunda, Sunila, Vasu, Murali and Mathew whose lives I probably made miserable.

The final product has been through several changes in development. Madan and his team at B.A's Computers have worked very hard. Thank you.

One always wonders how to express gratitude to one's subjects who so readily agreed to participate in the study. Suffice to say that I shall always cherish the memories of the hours I have spent with them.
