ACKNOWLEDGEMENTS

I would deem it a privilege and extend my sincere feelings of gratitude to an illustrious, distinguished scientist and my supervisor and research guide, Professor Dr. Dileep S. Pokle, Head, Department of Botany, Dr. Babasaheb Ambedkar Marathwada University, Aurangabad, for his initiative, benevolence, constant encouragement, and ready to help attitude which enabled me to overcome the stumbling hurdles during the period of investigation and also in the preparation of this thesis. Personally his grace and vibrant scientific temper has left an everlasting impression on me. I could not have accomplished the task of research and presenting the findings, but for the benign help and his suggestions provided by him at every level.

It is with great pleasure and respect, I wish to express my deep sense of gratitude and reverence to Dr. M.S. Kachole, Professor and Head, Department of Biochemistry, who allowed me to join as a Ph.D. student. His critical analysis of my work and constant encouragement during the research period will always stand in good stead.

I am also grateful to Dr. Ashok Chavan, Plant Pathologist and Registrar, Dr. Babasaheb Ambedkar Marathwada University, Aurangabad for useful discussions during the period of my research and critical review of my work.

I express my sincere thanks to the following research students: Shri Mohan Bhagwat, Lomte, Shantanu Chavan, Vinod Dadarao Parde, and Vinod Borde, who are immensely helpful during my course of research period.

I am also grateful to Mr. Richard Miller, International Officer, University of Southampton, United Kingdom, for his help me in securing the ‘Equivalence
Certificate’ of my M.Sc. degree from ‘Association of Indian Universities’ in New Delhi.

I would like to express my deep sense of gratitude to all the staff members in Department of Botany and Administration for their timely help on various aspects of my research work. My thanks are also extended to the library staff for their help during my research work.

A sincere word for the departed cotton farmers particularly in Andhra Pradesh and neighboring states, who took their lives when the cotton pest was unmanageable and due to various other personal reasons known best to the departed souls. I sincerely wish if this work is helpful in any way should help them in the long run even if it is miniscule. I always dreamt that no farmer should commit suicide and my heart bleeds for the sensitivity of the issue. I wish somebody is listening? And if this work could be of possible help to them and could reduce or remove further such actions/mishaps.

Last but not the least to my son, Dr. Rahul Jadhav and daughter, Malvika, whose countless hours from the computer I stole for my research work. And to my wife, Sow. Asha, whose encouragement and patience has always being remembered during the weekends, holidays, and evenings, when I was engrossed in probing my area of research work, when she should have been enjoying her weekends. Thanks to Asha for all the support and encouragement.

All this work would not have been possible without the blessings of our ‘Kuldevta’ ‘AMBABAI’.
