

## **ACKNOWLEDGMENTS**

*As is rightly said, no duty is more urgent than that of returning thanks.....*

First and foremost I would like to thank Almighty God for giving me strength to endure and overcome all the challenges. I thank Him for all the love and grace that has given me the power to believe in my passion and pursue my dreams. 'I could never have done this without the faith I have in you, the Almighty'.

Though I alone would be accredited for this dissertation, this work would not have been possible without the support, guidance and assistance of many people. Primarily, I am grateful to my advisor, Prof. (Dr.) Shukla Das. It makes me very fortunate to have worked under the supervision of such an experienced, encouraging, optimistic and supportive mentor. I am particularly grateful to her for the confidence in me and her unwavering support throughout my doctoral work. Her generosity and commitment to her students is truly unmatched. In particular, I would like to acknowledge her for being a respectable mentor as I have progressed through this journey. She is always willing to help when I have questions or need advice. She has sparked my interest in immunology particularly autoimmunity and I am privileged to have learned so much from her. Thanks mam for giving me the chance to work on a dissertation project that I found interesting throughout my training.

I am equally indebted to Prof. V. G. Ramachandran, my co-supervisor, for always being there to discuss and give valuable advice when I needed them the most. I am also pleased to learn from him because of his knowledge, insight, and brilliant interpretation of data. His insightful comments and constructive criticism prevented me from going astray with my research work. I am especially thankful to him for his careful readings and critical reviews of my scientific writings.

I would like to thank my co-supervisor, Prof. S. N. Bhattacharya, who has been ever so patient enough in listening to my words and offering me valuable guidance, whenever I requested for a meeting to discuss key findings of this research work. I have learned so much from him and am eternally grateful to him for being a truly amazing mentor.

I am indebted to my co-supervisor, Prof. B. D. Banerjee, for his ideas, support and involvement throughout this work. His constructive criticism and integral view on research has indeed made a deep impression on me.

I would also like to acknowledge my Advisory Committee members Dr. Rafat S. Ahmed and Dr. Sonal Saxena. Both of them have played an integral role in my development as a doctoral student and I have enjoyed learning from them. I am especially indebted to Dr. Rafat for mentoring me as one of her own students. Dr. Rafat's advice, support, and care have been crucial in the completion of my journey as a scientist-in-training. I thank Dr. Sonal for taking the time to come to UCMS to serve on my advisory committee.

I am also grateful to the Head, Department of Microbiology, Prof. I. R. Kaur for her tremendous support and for making all the laboratory facilities available to me. I also thank other faculty members of the Microbiology department for their support during the course of my research work.

I am very indebted to my colleagues and friends in the working groups of all my supervisors for maintaining the amazingly comfortable and pleasant working environment. Though I value greatly the friendship of each member of all the groups, I owe a special note of gratitude to Dr. Vikas Sood for all his help in carrying out flow cytometry based experiments, to Snehlata for her incessant help and co-operation, and to Dr. Sidharth Sonthalia and Dr. Prashant Verma for their help in patient enrolment.

I would like to thank Dr. D. K. Mitra and his Ph.D. students for all the help rendered in flow cytometry. I would also like to thank Nagarjuna and Prateek for teaching me FACS. My sincere thanks to all the post-graduate students and Senior Residents of the Department of Microbiology for their co-operation and support.

My warmest and sincere thanks are also due to the technical staff - Mr. Narendra Singh Moga, Mr. Suheil Ahmed, Ms. Poonam Singh, Mr. Kavindra Kumar, Mr. Jai Bhagwan, Mr. Amit, Mr. Krishna, Mr. Pradeep, Mr. Arun, Mr. Digvijay and all others in the department for their help and co-operation during my study tenure. Mr. Suheil Ahmed and Ms. Poonam Singh always cheered me up whenever my energy levels were low and helped me stay focused. They used to provide me with refreshments at my seat during the hectic work schedule. My special thanks to both of them for being such wonderful persons.

I am also thankful to my best friends Dr. Naseem, Dr. Tanvir, Dr. Junaid, Dr. Ikram, Dr. Showket, Dr. Ashiq, Rohit, Aslam, Nadeem, Bilal and Irshad for being a great moral support during difficult times in both personal and professional life. Naseem thank you for keeping me grounded with your sound advice and extending me your compassion when I needed it the most. Tanvir you have been a steadfast friend, loyal, loving, and

supportive. Ikram I have relied on your advice through these tough years. Junaid I am so blessed to have a friend in you. Aslam thanks for all of the fun times at UCMS cafeteria, the study times, the shopping and the get togethers.

The greatest motivation behind my research are my beloved parents and sisters to whom this dissertation is dedicated. Words cannot describe how much I appreciate you all. You have been supportive in every way possible. You have been my rock when I felt weak. You have cheered me on when I felt depleted. You have cried with me, laughed with me, and celebrated with me. I am so blessed to have you all. I owe my deepest gratitude to you for your enormous love, support and strong belief in me. You assured that I excel in all aspects of my life, and my education was no exception. Each achievement in my life is a tribute to your countless efforts.

There have been times during the tenure of this thesis that I have felt like giving up or wondering what this degree can possibly offer. It was exactly during these difficult phases that I have been accompanied and supported by many people, known and unknown, reminding me the necessity of hope and perseverance. At this juncture, I would like to thank all those, whose names aren't mentioned here, but nevertheless help rendered by them in one way or the other, has made this doctoral thesis possible. There is no doubt in my mind that I wouldn't be where I am today without each and every one of you and I can't thank you enough.

Last but not the least, I wish to thank all the patients for their selfless and invaluable contribution to my thesis work.

Financial assistance provided by the Department of Science and Technology, Govt. of India (File no. SR/SO/HS-82/2005) for this study; and Senior Research fellowship provided to me by Indian Council of Medical Research (Ref.45/3/2011/Imm/BMS) are sincerely acknowledged.
