ACKNOWLEDGMENTS

Firstly I would like to thank our Merciful God for being the guide and higher support in my life. The research work described in this thesis grew from the ideas and suggestions of Dr. S. B. Paul. Under his active supervision I have gained experience in areas of lenticular biochemistry. His tireless guidance and encouragement in every step of acquiring the data of this research work made it possible for me to get momentum in continuing and completing this work. His hard work inspired me to maintain the constancy of my purpose while going through the difficult phases of my experiments. I am extremely fortunate to have had the opportunity of getting Dr. Paul as my supervisor. I do not have language to explain my gratitude to him.

Dr. B. K. Triwary, the renowned teacher is kind enough to help the research scholars without any time constraint. He was extremely encouraging from the beginning to the end of my research work. His suggestions and supervision in every step of solving my problems related to this work brought its successful outcome. His successful work as a visiting associate professor in the University of Chicago inspired me a lot in my field of research. It was my fortune to have him as my co-supervisor. I shall remain ever grateful to him for all that he did for me.

One of the most encouraging persons of the department of chemistry is Professor NVS Rao. He always advised and insisted for my early completion of this work. I was inspired by his international fame. His good spirits and helping hand towards our work is ever membrane for me.

Another most encouraging person of the department of chemistry is Professor M. R. Islam. It was during his tenure, as the head of the department, that I was allowed to do this study. His valuable suggestions and co-operations during my work and seminars deserve my special and heartfelt thanks.

Dr. C. R. Bhattacharjee helped me as if he was a co-supervisor of my study work, though officially he was not. His experience, knowledge and valuable time are embedded in my success during this complex research work. I thank him from the core of my heart for his active help as well as his suggestions.

The encouragements and suggestions of the renowned and respectable teacher, Prof O. Biswas, Dean, School of Physical Sciences, AVS helped me a lot to proceed with my research work during the tough moments of this study. He deserves my heartfelt thanks. I shall remain ever grateful to Prof Biswas.

My special thanks go to Dr. M. Dutta Choudhury who is another teacher helping me like a co-supervisor during this work. He was always interested in discussing my work with me, and always gave good suggestions. His care, guidance and inspirations deserve special mention.

Without the help of Dr. P. Mondal, Dr. Manoj Paul and Dr. Sh. Jasimuddin this thesis would have taken much longer time to complete. During many difficulties their suggestions brought the solutions. I acknowledge them my sincere gratitude for their generous help and co-operation.
I shall always remember every help, motherly attitude and suggestions of Dr. Mukta Paul during the initiation, progression and completion of this work. Despite her busy life schedule and repeated illness she took every care to encourage me and to make me feel comfortable during examinations and presentations.

I am very much thankful to Prof. S.S. Dhar, Principal, SMC; Prof M.M. Deka, Principal, GMC; Dr. H. Bhattacharjee, Director, SSN; Prof. R.K. Goswami, Head, Deptt of Biochemistry, AMC; Prof. N. Sinha, Head, Deptt of Biochemistry, SMC; Prof. P.K. Goswami (GMC) and Prof C.K. Barua, Director, RJO, GMC for permitting me to use their Institutes/ Laboratories during this study. Their positive attitudes and encouragements are always memorable.

I am also thankful Prof K. Hemachandran (AVS), Prof K.C. Mazumder (KV), Prof A.T. Khan (ITT-G) for their suggestions, encouragements, guidance and active help whenever I needed.

Special thanks go to the Chairman, Convener and staff of Central Instrumentation Laboratory, AVS for helping me with necessary materials.

I must thank the technical and office staff of the Department of Chemistry, AVS for their prompt help and cooperation as and when necessary throughout the period of my research work. Their helping hands will remain memorable to me.

I must also thank all technical and office staff of Department of Ophthalmology (SMC), Department of Biochemistry (SMC), RJO (GMC) and C.I. F. (ITT-G) for their cooperation and assistance as and when required.

The inspiration, teachings and guidance of my father Late Salimuddin Ahmed and my mother Mrs. Meherun Nesa has made me what I am today. Because of their effort, since my birth, I have reached the position to undertake such a research work. Their perspiration and dedication cannot be repaid by acknowledging thanks or anything else in this world. I owe the greatest debt of gratitude to them.

Last but not least, I would also like to express my deep thanks to all my family members for supporting me during the long academic pursuits of mine and for helping me finish what I started a long time ago. In this regard the love and support of my mother Meherun and my wife Nasima has come first in acknowledging debts. They have kept me afloat through all these self-centered years without expecting anything from me except the successful completion of my work.

At the end I would like to share the joy of our novel discovery with all of persons mentioned above.

Mir Alam Siddique
