LIST OF TABLES

Table 1  Weighted means with their standard errors, number of observations and coefficient of variation for body weights at different ages in native breeds of sheep.  7

Table 2  Heritability estimates of body weights at different ages in Indian breeds of sheep  16

Table 3  Heritability estimates of birth and weaning weights of exotic breeds of sheep.  17

Table 4  Genetic and phenotypic correlation of body weights at different ages of Indian breeds.  18

Table 5  Genetic and phenotypic correlations of body weights at different ages for exotic breeds.  19

Table 6  Genetic and phenotypic correlations of weights and gains of Indian and exotic breeds of sheep.  30

Table 7  Pre- and post-weaning and feedlot gains.  30

Table 8  Heritability estimates of gains in Indian and exotic breeds of sheep  32

Table 9  Pre- and post-weaning survivability of various Indian breeds and their crosses.  35

Table 10  Means and heritabilities for greasy fleece weight and its genetic and phenotypic correlation with body weights.  40

Table 11  Average carcass weight, dressing percentage and efficiency of feed conversion in Indian sheep breeds.  43

Table 12  Year, season and sexwise distribution of 54 animals of Malpura and Sonadi breeds.
Table 13  Least squares means alongwith standard errors and number of observations for birth weight (kg) in different classes.

Table 14  Analysis of variance for studying the effect of different factors on birth weight in Malpura and Sonadi lambs.

Table 15  Least squares means alongwith standard errors and number of observations for four weeks weight (kg) in different classes.

Table 16  Analysis of variance for studying the effects of different factors on four weeks weight in Malpura and Sonadi lambs.

Table 17  Least squares means alongwith standard errors and number of observations for weaning weight (kg) in different classes.

Table 18  Analysis of variance for studying the effect of different factors on weaning weight in Malpura and Sonadi lambs.

Table 19  Least squares means alongwith standard errors and number of observations for six months weight in different classes.

Table 20  Analysis of variance for studying the effects of different factors on six months body weight in Malpura and Sonadi lambs.

Table 21  Least squares means alongwith standard errors and number of observations for pre-weaning average daily gain in different classes.

Table 22  Analysis of variance for studying the effect of different factors on pre-weaning average daily gain in Malpura and Sonadi lambs.

Table 23  Least squares means alongwith standard errors and number of observations for post-weaning average daily gain in different classes.
Table 24  Analysis of variance for studying the effect of different factors on post-weaning average daily gain in Malpura and Sonadi lambs.  90

Table 25  Least squares means along with standard errors and number of observations for first six monthly greasy fleece weight in different classes.  92

Table 26  Analysis of variance for studying the effect of different factors on first six monthly greasy fleece weight in Malpura and Sonadi lambs.  93

Table 27  Heritabilities, genetic and phenotypic correlations among body weights at different ages upto six months of age, first six monthly greasy fleece weight and pre- and post-weaning average daily gains.  96

Table 28  Expected genetic progress through direct selection and correlated response to individual trait selection.  106

Table 29  Relative economic efficiency of different traits included in the selection index.  108

Table 30  Weights attached to characters included in the indices, $R_{y}$ values for the indices and $\Delta G_{y}$ for the individual traits to index selection.  111

Table 31  Least squares means along with standard errors and number of observations for pre-weaning survival in different classes.  113

Table 32  Analysis of variance for studying the effects of different factors on pre-weaning survival in Malpura and Sonadi lambs.  114

Table 33  Least squares means along with standard errors and number of observations for post-weaning survival in different classes.  115
