ACKNOWLEDGEMENTS

I owe my debt of gratitude to the PEC University of Technology, Chandigarh, for having granted me a scholarship to undertake the doctoral project.

I am thankful to the Director, PEC University of Technology, the faculty and staff of the Department of Electronics and Electrical Communication, and the library staff who were always helpful and cooperative in my work. Of special mention is the encouragement and guidance of Dr. (Mrs) Neelam Rup Prakash, Associate Professor, Department of Electronics and Electrical Communication, PEC.

The subject of this doctoral thesis has been engaging my attention for quite some time. In course of my participation in many national and international seminars and workshops, I had the opportunity of interacting with many experts on the subject.

Luckily, it was at a Faculty Leadership Programme at Mysore a few years back that the smooth, clearly defined and elegantly contoured lines of the project began to emerge. I particularly thank Dr. C. Sidney Burrus, Maxfield and Oshman Professor Emeritus of Engineering, Rice University, Houston, for providing valuable insights into the project.

I will be failing in my duty if I do not acknowledge the contribution of Prof. P.P. Vaidyanathan, Professor of Electrical Engineering, California Institute of Technology, Pasadena, California. His articles and books were a great source of strength and inspiration to me while working on the project. I also thank all those experts and scholars whose articles and books I had consulted and referred to in this work.

I also thank my family for their patience and understanding during the period of research. Without their help, this thesis would not have seen the light of day.

Hopefully, this dissertation will help break new ground and contribute to knowledge so that Chandigarh remains memorable for the intellectual payoffs in the years ahead.
