ACKNOWLEDGEMENTS

This work has been supported by the University Grants Commission, New Delhi. They awarded me a senior research fellowship and also a contingent grant, for which I am thankful.

I wish to express my gratitude and sincere appreciation to Dr. Harkishan Singh, Reader in Pharmaceutical Chemistry, for his generous guidance, continued encouragement and constructive criticism during this investigation and also for the helpful suggestions in writing of the thesis.

My thanks are due to Professor K. N. Gaind, Head of the Department, for providing the research facilities.

I am indebted to Professor Derek H. R. Barton and Mr. R. B. Boar of the Imperial College of Science and Technology, London, for comparing the isolated alkaloidal entities with authentic specimens.

The gas chromatograms and some of the spectra were obtained through the kind courtesy of Dr. J. W. Rowe of the USDA Forest Products Laboratory, Madison, Wisconsin.
I am grateful to Dr. B. J. Ray Ghatak, Regional Research Laboratory, Jammu, for allowing me to carry out the pharmacological studies in his laboratory.
