List of tables

Table 4.1 Microclimatic variability in different land use systems at Sagalee and Kheel.

Table 4.2 Soil physical properties in different land use systems at Sagalee and Kheel.

Table 4.3 Soil moisture content (%) of different land use systems at Sagalee and Kheel (annual mean± SE).

Table 4.4 Soil pH of different land use systems at Sagalee and Kheel (annual mean± SE)

Table 4.5 Ammonium–N concentration (µg g⁻¹) in soils of different land use systems at Sagalee and Kheel (annual mean± SE).

Table 4.6 Nitrate-N concentration (µg g⁻¹) in soil of different land use systems at Sagalee and Kheel (annual mean± SE).

Table 4.7 Phosphate-P concentration (µg g⁻¹) in soil of different land use systems at Sagalee and Kheel (annual mean± SE).

Table 4.8 Soil organic-C (%) of different land use systems at Sagalee and Kheel (annual mean± SE).

Table 4.9 Total-N (%) in soil of different land use systems at Sagalee and Kheel (annual mean± SE).

Table 4.10 C/N ratio in soils of different land use systems at Sagalee and Kheel.

Table 4.11 Correlation matrix of physical properties of soil irrespective of sites, land use system, season, depth and year.

Table 4.12 Contribution (%) of ammonium-N to total -N in soil of different land use systems at Sagalee and Kheel (annual mean± SE).

Table 4.13 Contribution (%) of nitrate-N to total N in soil of different land use systems at Sagalee and Kheel (annual mean± SE).

Table 4.14 Contribution (%) of total inorganic N (ammonium + nitrate) to total N in soil of different land use systems at Sagalee and Kheel (annual mean± SE).

Table 4.15 Correlation matrix among the different chemical properties of soil irrespective of sites, land use system, season, depth and year.
Table 5.1 Fungal population (No. of colonies x $10^3$ g$^{-1}$ dry soil) in soils of different land use systems at Sagalee and Kheel (annual mean ± SE).

Table 5.2 Bacteria population (No. of colonies x $10^4$ g$^{-1}$ dry soil) in soils of different land use systems at Sagalee and Kheel (annual mean ± SE).

Table 5.3 Soil microbial biomass C (µg g$^{-1}$) in different land use systems at Sagalee and Kheel (annual mean ± SE).

Table 5.4 Soil microbial biomass N (µg g$^{-1}$) in different land use systems at Sagalee and Kheel (annual mean ± SE).

Table 5.5 Contribution (%) of microbial biomass C to soil organic C.

Table 5.6 Contribution (%) microbial biomass N to total soil N

Table 5.7 Soil microbial biomass C/N ratio in different land use systems at Sagalee and Kheel.

Table 6.1 Spatial variation of plant species in various land use system at Sagalee and Kheel.

Table 6.2 Variation in family, genus and species compositions in different land use systems at Sagalee.

Table 6.3 Variation in family, genus and species compositions in different land use systems at Kheel.

Table 6.4 Tree density, basal area and IVI of different land use system at Sagalee.

Table 6.5 Tree density, basal area and IVI of different land use system at Kheel.

Table 6.6 Density, basal area and IVI of shrubs of different land use system at Sagalee.

Table 6.7 Density, basal area and IVI of shrubs of different land use system at Kheel.

Table 6.8 Density, basal area and IVI of herbs of different land use system at Sagalee.

Table 6.9 Density, basal area and IVI of herbs of different land use system at Kheel.

Table 6.10 Rate of quantitative change (%) of plant species in different land use systems with respect to forest at Sagalee and Kheel.

Table 6.11 Comparison of diversity indices of trees, shrubs and herbs of different land use systems at Sagalee and Kheel.

Table 6.12 Comparison of dominance indices of trees, shrubs and herbs of different land use systems at Sagalee and Kheel.
Table 7.1 Monthly variation of mean total biomass (g m\(^{-2}\)) in crop and weed community in different land use system at Sagalee (mean± SE).

Table 7.2 Monthly variation of total biomass (g m\(^{-2}\)) in crop and weed community in different land use system at Kheel (mean± SE).

Table 7.3 Seasonal variation of biomass accumulation (g m\(^{-2}\)) by crop and weed community in different land use systems at Sagalee and Kheel.

Table 7.4 Monthly variation of biomass productivity (g m\(^{-2}\) month\(^{-1}\)) of crop and weed community in different land use system at Sagalee and annual NPP (g m\(^{-2}\) year\(^{-1}\)).

Table 7.5 Variation in biomass productivity (g m\(^{-2}\) month\(^{-1}\)) of crop and weed communities in different land use system at Kheel and annual NPP (g m\(^{-2}\) year\(^{-1}\)).

Table 7.6 Net primary productivity (g m\(^{-2}\) year\(^{-1}\)) of different ecosystem type reported by different workers.

Table 8.1 Characteristics of herbaceous plants/crop residues found in different land use systems.

Table 8.2 Correlation coefficients among initial chemistry of crop/plant residues.

Table 8.3 Crop/plant residue decomposition rate (% weight loss day\(^{-1}\)) as influenced by climatic variables.

Table 8.4 Annual decay constant (k) of different crop/plant residues and their t\(_{50}\) and t\(_{99}\).

Table 8.5 Annual N mineralization constant (k\(_n\)) of different crop/plant residues and their t\(_{50}\) and t\(_{99}\).

Table 9.1 Different treatments given to the soil to amend the soil in the experimental plots.

Table 9.2 Nutrient content and C/N ratio of organic manure.

Table 9.3 Field experimental work schedule

Table 9.4 Shoot and root length (cm) of test plants grown in different treatment plots.

Table 9.5 Basal area (cm\(^2\) ha\(^{-1}\)) of test plants growing under different soil treatments.

Table 9.6 Biomass production (kg ha\(^{-1}\)) by Zea mays growing under different soil treatment.

Table 9.7 Biomass production (kg ha\(^{-1}\)) by Phaseolus vulgaris growing under different soil treatment.
Table 9.8 Biomass production (kg ha\(^{-1}\)) by *Abelmoschus esculentus* growing under different soil treatment.

Table 9.9 Available N (μg g\(^{-1}\)) in soil amended with different organic manure.

Table 9.10 N-mineralization (μg g\(^{-1}\)) in soil amended with different organic manures.

Table 9.11 Correlation between biomass production over time and soil chemical properties (available N and N Mineralization).
