Preface	i
Chapter 1	
1.1 General Introduction	1
1.2 Bent or Banana Shaped molecules: Banana Liquid Crystal Polymorphism	4
1.3 Objective of Thesis	23
Chapter 2: Experimental	
2.1 Synthesis	25
2.2 Experimental techniques	26
Chapter 3	
3.1 Novel Non Linear Optical Chromophores Exhibiting Mesomorphism.	
3.1.1 Introduction	28
3.1.2 Experimental	30
3.1.3 Results and Discussion	33
3.1.4 Conclusion	40
3.2 Novel Smectic Liquid Crystalline Phase Exhibited by W- shaped molecules	
3.2.1 Introduction	41
3.2.2 Experimental	43
3.2.3 Results and Discussion	44
3.2.4 Conclusion	53
3.3 First examples of novel bent shaped mesogens with bent angle 60° based on 1,2-diamine: 4-nitro-N, N'-bis [2-hydroxy-5-(4'-n-alkyl)-phenylazo-benzylidene]-phenylene-1,2-diamines	
3.3.1 Introduction	54
3.3.2 Experimental	55
3.3.3 Results and Discussion	56
3.3.4 Conclusion	61
3.4 W-shaped molecules; unsubstituted homologues, 13PD14	
3.4.1 Introduction	62
3.4.2 Experimental	62
3.4.3 Results and Discussion	64
3.5 Bent shaped molecules with reduced bending angle ($\sim 60^\circ$), 12PD14	
3.5.1 Introduction	67
3.5.2 Experimental	68
3.5.3 Result and discussion	70
Chapter 4: Metallomesogen	
4.1 Introduction	73
4.2 Experimental	83
4.3 Result and discussion of nO(OH).2MBC and its mono and bi- nuclear Copper(II) complexes	89
4.3.3 Conclusion	99
4.4 Results and discussion of nO(OH) _m and its Ln (III) complexes	100
4.4.4 Conclusion	109
Chapter 5	
5 References	110
