LIST OF FIGURES

Fig. 1. Survival curve of *Lactobacillus bulgaricus* 59 after exposure to ultraviolet irradiation.

Fig. 2. Survival curve of *Lactobacillus casei RTS* after exposure to ultraviolet irradiation.

Fig. 3. Survival curve of *Lactobacillus bulgaricus* 59 after exposure to gamma radiation.

Fig. 4. Survival curve of *Lactobacillus casei RTS* after exposure to gamma radiation.

Fig. 5. Survival curve of *Lactobacillus bulgaricus* 59 after exposure to ethylenimine.

Fig. 6. Survival curve of *Lactobacillus casei RTS* after exposure to ethylenimine.

Fig. 7. Survival curve of *Lactobacillus bulgaricus* 59 after exposure to ethyl methane-sulfonate.

Fig. 8. Survival curve of *Lactobacillus casei RTS* after exposure to ethyl methane-sulfonate.

Fig. 9. Survival curve of *Lactobacillus bulgaricus* 59 after exposure to N-methyl-N'-Nitro-N-Nitrosoguanidine.

Fig. 10. Titratable and volatile acidities and proteolytic activity of 5 gamma mutants of *L. bulgaricus* 59.

Fig. 11. Titratable and volatile acidities and proteolytic activity of 5 nitrosoguanidine mutants of *L. bulgaricus* 59.

Fig. 12. Titratable and volatile acidities and proteolytic activity of 5 gamma mutants of *L. casei RTS*.

Fig. 13. Titratable and volatile acidities and proteolytic activity of ethyl methane-sulfonate mutants of *L. casei RTS*.
Fig. 14. Proteolytic activity of selected mutants of *L. bulgaricus* 59 after various incubation periods.

Fig. 15. Proteolytic activity of selected mutants of *L. casei* RTS after various incubation periods.

Fig. 16. Starch gel electrophoretic pattern (veronal buffer, pH 8.6; urea, 20%; 10 mA/cm for 3 hours) of whole casein after incubation for 10 days with washed cell suspension of *L. bulgaricus* 59 and its mutant Lb/G-57.

Fig. 17. Starch gel electrophoretic pattern (veronal buffer, pH 8.6; urea, 20%; 10 mA/cm for 3 hours) of whole casein after incubation for 10 days with washed cell suspension of *L. casei* RTS and its mutant Lc/G-1.

Fig. 18. DEAE cellulose column chromatogram of untreated whole casein and casein fractions insoluble at pH 4.6.

Fig. 19. DEAE cellulose column chromatogram of whole casein and casein fractions after incubation with washed cell suspension of *Lactobacillus bulgaricus* 59.

Fig. 20. DEAE cellulose column chromatogram of whole casein and casein fractions after incubation with washed cell suspension of Lb/G-57.

Fig. 21. DEAE cellulose column chromatogram of whole casein and casein fractions after incubation with washed cell suspension of *L. casei* RTS.

Fig. 22. DEAE cellulose column chromatogram of whole casein and casein fractions after incubation with washed cell suspension of Lc/G-1.

Fig. 23. Polyacrylamide gel electrophoretic patterns (veronal buffer, pH 8.0, urea 20%) of whole casein and casein fractions after incubation for 10 days with *Lactobacilli* cultures.
