

List of tables

Table 1.1:	Major antibiotic classes and resistance strategies employed by bacteria against them
Table 1.2:	Classification schemes for beta lactamases
Table 1.3:	The evolution of Drug Research
Table 3.1:	The summary of the hypothesis run.
Table 3.2:	The fit values of the test set of compounds on Hypo-1.
Table 3.3:	The fit values of the external test set of known β -lactamase inhibitors
Table 3.4:	Goldfitness score of the selected inhibitors against all the selected mutants.
Table 3.5:	Binding affinity obtained by autodock and x-score of the selected inhibitors against SHV S130G and SHV-72.
Table 3.6:	Binding affinity obtained by autodock and x-score of the selected inhibitors against TEM-76 and TEM-30.
Table 3.7:	Detail description of the amino acid residues involved in interaction of the selected inhibitors against SHV S130G
Table 3.8:	Detail description of the amino acid residues involved in interaction of the selected inhibitors against SHV-72
Table 3.9:	Detail description of the amino acid residues involved in interaction of the selected inhibitors against TEM-30
Table 3.10:	Detail description of the amino acid residues involved in interaction of the selected inhibitors against TEM-76

Table 4.1: Binding efficacy of clavulanic against SHV wt at different time intervals and the active site residues involved in the binding

Table 4.2: Binding efficacy of clavulanic against SHV S130G mutant at different time intervals and the active site residues involved in the binding
