LIST OF PLATES

Plate 1: Thin Layer Chromatography (TLC) fingerprints of various crude extracts of leaves and bark of *Pajanelia longifolia* (Willd.) K. Schuman

Plate 2: Analysis of anti-microbial activity of crude extracts of leaves and bark of *Pajanelia longifolia* (Willd.) K. Schuman

Plate 3: Analysis of anti-microbial activity of crude extracts of leaves and bark of *Pajanelia longifolia* (Willd.) K. Schuman

Plate 4: Molecular properties and drug - likeliness of Compound 1, 2 and 4.

Plate 5: Pharmacophore mapping of Compound 1. The red and yellow contours represents hydrogen bond acceptors (HBD) and hydrophobic feature. (HBA: Hydrogen Bond Donor; H: Hydrophobic)

Plate 8: Structure of replicative and translesion DNA polymerases of *E. coli*. (B). Three dimensional structure of 4-isopentylcyclohexyl-4-(5-methoxypent-3-enyloxy) butanoate isolated from crude leaf extracts extracted with ethyl acetate of *Pajanelia longifolia* (Willd.) K. Schuman
Plate 9: Docking results, showing negative binding affinity of 4-isopentylcyclohexyl-4-(5-methoxypent-3-enyloxy) butanoate with replicative and translesion DNA polymerases of E. coli. The result was generated using AutoDock 4.0.

Plate 10: (A). Crystal Structure of RNA-dependent RNA polymerase genotype 2a of hepatitis C virus expressed in E. coli. (B). Three dimensional structure of 2-(4,5-dihydro-3-methyl-5-oxo-1-phenyl-4-pyrazolyl)-5-nitrobenzoic acid isolated from crude bark extract of Pajanelia longifolia (Willd.) K. Schuman, extracted with ethyl acetate.

Plate 11: Docking results, showing negative binding affinity of 2-(4,5-dihydro-3-methyl-5-oxo-1-phenyl-4-pyrazolyl)-5-nitrobenzoic acid with RNA-dependent RNA polymerase genotype 2a of hepatitis C virus. The result was generated using AutoDock 4.0.
