Acknowledgements

I am extremely indebted to my supervisor Prof. B. K. Dutta, Head of Department, Ecology and Environmental Science, Assam University, Silchar, Co-supervisors, Prof. A. K. Das, Ecology and Environmental Science Department, Assam University and Dr. Dhrupad Choudhury, Coordinator, IFAD/ICIMOD Grant Program, ICIMOD, Kathmandu who had lent their whole hearted support at all stages of this onerous exercise. Without their able guidance, mutual counsel, forceful encouragement and advice, this work could never been completed.

Spending more than five years in the Tangkuful villages is a great experience. Each and every member of all villages helps me in numerous ways while rendering my research work. These villagers shared their knowledge, insights, activities and practices without the slightest reservations. Together with them, I enjoyed at field and learned a lot in the process. Food, shelter and social life of the community that I adapted quickly was all because of the generosity of the villagers that helped me in understanding the deep rooted social and cultural fabrics associated with various agricultural activities. Not only the present piece of research work carried out at field but also my association with the villagers especially of Kalhang village will remain forever. Devoted efforts and help throughout the research work, carrying research samples on headloads together with me for kilometers, my special thanks to Mr. Wungnaoshung Zimick.

I am thankful to my colleagues and friends of GBPIHED, NE Unit, Itanagar for sharing ideas on research methodologies, analytical works and handling the instruments. Special thanks to Mr. Debeswar Bora, Laboratory Assistant of the unit for his sincerity and able help in performing laboratory works for soil analysis day and night. Identifying plant samples and accompanying me in the field as well, I thankfully acknowledged the help of Mr. K. Ibotombi Singh, Senior Scientific Officer at Director General of Quality Assurance, Kanpur, Ministry of Defense, Government of India who was working as a SRF of GBPIHED, NE Unit. Sincere
thanks are also to my friends - Research Fellows, Department of Forestry, NERIST, Itanagar for sharing valuable ideas on research methodologies and statistical analysis of datas. Support and helps from my previous colleagues of UDCRMS/IFAD and associated NGOs, Ukhrul district, Manipur during the initial endeavor at my study area and in the field was notable.

Partial financial support of the NERCRMP/IFAD, Shillong during the initial period of this work and by GSBPHED, Kosi Katarmal, Uttarkhand at the latter part of the work are gratefully acknowledged. My special thanks are also due to Dr. P.K. Samal, Scientist Incharge, N.E.Unit of the GSBPHED, Itanagar for facilities, forceful encouragement and constant moral support in various stages of this research work.

Further, I express my gratitude to each and every faculty, both teaching and non-teaching members of Ecology and Environmental Science Department, Assam University, Silchar for which the idea of ecology/ ecosystem and human survival was made known to me. My special gratitude to Prof. A. Gupta, Dean, School of Ecology and Environmental Sciences for paving way on research interest in the field of ecology. His able guidance and encouragement during my M.Sc. course enabled me to expose and mingled myself among the research community.

Last but not the least, pushing me up-to this stage, constant supports from my parents and family members were not easy task. It is all due to the toughness and hardship my parents tackled for me that I am now, and can shape the thesis to this stage. Once again, I oblige the firm stand and affection of my wife Arjubala as well as the moral support, constant encouragement, patience and academic curiosity of both families. Their blessings help me in building the inner strength and courage to frame my study in this shape. The thesis is therefore dedicated to my parents, cultivators by profession as well as to the upland farming communities.
