List of Figures

Figures

Fig 3.1: Map showing the location of the study site in Barak Valley, Assam
Fig 3.2: Sketch map of the study village depicting different land-use systems
         (HG= homegarden, BG= bamboo grove)
Fig 3.3: Climate data of the study site from 2003-2006
Fig 3.4: Forest cover map of Assam
Fig 4.1: Socioeconomic characteristics of the homegarden owners in village Dargakona
         (Barak Valley, Assam)
Fig 5.1: Vertical Stratification in a Typical Homegarden in village Dargakona
         (Barak Valley, Assam)
Fig 5.2: Vertical stratification in the Homegardens in village Dargakona (Barak Valley,
         Assam)
Fig 5.3: Importance Value Index of some dominant species (IVI >10) in the
         Homegardens in village Dargakona (Barak Valley, Assam)
Fig 5.4: Dominance-distribution curve of woody species in the Homegardens in village
         Dargakona (Barak Valley, Assam)
Fig 5.5: Population structure of some dominant tree species and the total woody species
         in different girth classes in the Homegardens in village Dargakona (Barak
         Valley, Assam)
Fig 5.6: Mean Plant uses per Homegarden in village Dargakona (Barak Valley, Assam)
Fig 5.7: Bamboo grove as an extended Homegarden in village Dargakona
         (Barak Valley, Assam)
Fig 5.8: Percentage occurrence of different bamboo species in the Homegardens in
         village Dargakona (Barak Valley, Assam)
Fig 5.9: Vegetable zone management and harvesting in the Homegardens in village
         Dargakona (Barak Valley, Assam)
Fig 5.10: Betel grove in the Homegardens in village Dargakona (Barak Valley, Assam)
Fig 5.11: Dense zone in the Homegardens in village Dargakona (Barak Valley, Assam)
Fig 5.12: Children eating fruits of (a) Artocarpus chama (b) Spondias pinnata and (c)
         Averrhoa carambola in the Homegardens in village Dargakona (Barak Valley,
         Assam)
Fig 5.13: Hierarchical classification of 60 Homegardens in village Dargakona
         (Barak Valley, Assam)
Fig 5.14: Functional characteristics of Homegarden Types in village Dargakona
         (Barak Valley, Assam)
Fig 5.15: Timber of Toona ciliata extracted from the homegardens are often used in the
         construction of houses in the village Dargakona (Barak Valley, Assam)
Fig 5.16: Fruits of Artocarpus heterophyllus and Mangifera indica sold in local markets
Fig 5.17: Varieties of Artocarpus heterophyllus cultivated by the farmers in the
         Homegardens in village Dargakona (Barak Valley, Assam)
Fig 5.18: Variations in seed shape and size within the fruits of Artocarpus heterophyllus
         maintained by the villagers in the Homegardens in village Dargakona
         (Barak Valley, Assam)
Fig 5.19: Fruits of *Aegle marmelos* harvested in large amounts in the Homegardens and sold in the local market during religious occasions

Fig 5.20: Bamboo species used as roofing material, for basket making and also products of bamboo are sold

Fig 6.1: Monthly Litterfall Pattern in Homegardens (2005-06) and the climatic data of village Dargakona (Barak Valley, Assam)

Fig 6.2: Percentage contribution of Leaf and Non-leaf components to the Litterfall Pattern in the Homegardens in village Dargakona (Barak Valley, Assam)

Fig 6.3: Litterfall Pattern of some dominant litter components in the Homegardens in village Dargakona (Barak Valley, Assam)

Fig 6.4: Seasonal changes in the concentration of nitrogen in leaf litter samples of some dominant Homegarden tree species in village Dargakona (Barak Valley, Assam)

Fig 6.5: Biomass (% of the original) remaining in the litter bags for ten multipurpose Homegarden tree species in village Dargakona (Barak Valley, Assam)

Fig 6.6: Nitrogen concentration and Nitrogen remaining (%) in the litter as percentage of dry weight of ten multipurpose Homegarden tree species in village Dargakona (Barak Valley, Assam)

Fig 7.1: Vegetative and reproductive phenology of some homegarden tree species and climate during the two consecutive years in village Dargakona (Barak Valley, Assam)

Fig 7.2: Phenological periodicity of tree species (a) Number of species in leaf fall (b) Number of species in flushing (c) Number of species in flowering (d) Number of species in fruiting in the Homegardens in village Dargakona (Barak Valley, Assam)

Fig 7.3: Flowering in the leafless trees of *Bombax ceiba Erythrina variegata* and *Moringa oleifera* in the Homegardens in village Dargakona (Barak Valley, Assam)

Fig 7.4: Flowering in the leafless trees of *Bombax ceiba* and *Erythrina variegata* attract birds in the Homegardens in village Dargakona (Barak Valley, Assam)

Fig 8.1: Traditional rice farming practices in village Dargakona (Barak Valley, Assam)

Fig 8.2: Processing of grains for consumption by pounding with *dheki* and storage in godowns (*ugaar*) and in sacks (*mocha*) in village Dargakona (Barak Valley, Assam)

Fig 8.3: Rice Varieties cultivated by farmers in three years in village Dargakona (Barak Valley, Assam)

Fig 8.4: Number of varieties cultivated by the farmers in village Dargakona (Barak Valley, Assam)

Fig 8.5: Relative Importance Values of rice varieties of three consecutive years in village Dargakona (Barak Valley, Assam) (2003-05)

Fig 8.6: Traditional Seed Flow in village Dargakona (Barak Valley, Assam)

Fig 8.7: Seeds of rice stored in traditional storage systems known as *Dol* in village Dargakona (Barak Valley, Assam)

Fig 9.1: Number of soil types of farmers (*n=*30) in village Dargakona (Barak Valley, Assam)
Fig 9.2: Farmers’ soil type and land area (n=30) in village Dargakona (Barak Valley, Assam)

Fig 9.3: Land area under different land forms in rice cultivation (n=30) in village Dargakona (Barak Valley, Assam)

Fig 9.4: Number of landform types of farmers (n=30) in village Dargakona (Barak Valley, Assam)

Fig 9.5: Number of soil samples in different textural classes from 30 farmers’ field in village Dargakona (Barak Valley, Assam)

Fig 10.1: Structure of Traditional Ecological Knowledge and their role in the Management of Diversity in the rural Homegardens

Fig 10.2: Seedling nursery of *Aquilaria malaccensis* in village Dargakona (Barak Valley, Assam)

Fig 10.3: Distribution of *Aquilaria malaccensis* seedlings in the village Dargakona (Barak Valley, Assam)

Fig 10.4: *Berapua* rice variety successfully cultivated by a farmer in village Dargakona (Barak Valley, Assam)

Fig 10.5: A bottom-up representation of the process of conservation of agrobiodiversity in rural homegardens and rice fields ‘through use’ as the main criteria of selection.
