ACKNOWLEDGMENTS

Present work is a product of inspiration, encouragement, counsels, assistance and supervision from various sources. I feel pleasure in most gratefully acknowledging my indebtedness for the same.

It has been my proud privilege to work under the guidance of an eminent library professional, Dr. H.R. Chopra, M.A.; M.Lib.Sc (University Medallist); PH.D.; M.I.Inf.Sc. (England); Chairman of the Department of Library and Information Science, Panjab University, Chandigarh (India). His deep knowledge of the subject, comprehensive guidance, thought-provoking discussions, constructive criticism and expert advice have been most helpful at every step during the course of the study. My deep sense of gratitudes to him cannot be adequately expressed in words.

I take this opportunity to express my thanks to Dr. S.S. Murthy, Director and Shri S.N. Mehta, Deputy Director, DESIDOC for their continuous encouragement and providing me all sort of help for compilation of the present work. I also extend my heart-felt thanks to the scientists working at different DRDO labs/estts in India for their sincere cooperation during the interview, without which it would not have been possible for me to complete this uphill task.

I express my deep sense of gratitude to my five ‘GURUS’ (Teachers) at Department of Library and Information Science, Panjab University, Chandigarh.

It sounds rather unconventional to make a mention of one’s family members on such occasions. I venture to be unconventional in this regard because I feel convinced that it is basically the inspiration of my parents and cooperation of wife, that enabled me to complete the project work within the assigned time.

I wish to express my appreciation to many authors whose work I have consulted very often and quoted in this research report. There are many more people who helped me in various capacities to complete this work without delay, I would like to thank them also.
