ACKNOWLEDGEMENTS

The completion of my research work demanded constant supervision and guidance from my guide and supervisor, Dr. S.L. Goel, Professor of Public Administration (Retd.), Panjab University, Chandigarh. He has been very generous to me, in spite of his heavy academic schedule, by guiding me meticulously through critical discussions and by offering valuable suggestions for planning and conducting my research work. But for his scholarly and able guidance, the work would not have been in this form. I consider it a great privilege and a pleasure to acknowledge my heartfelt gratitude and admiration for my teacher.

I am thankful to Prof. B. S. Chuman, Chairman, Department of Public Administration for meaningful guidance, as well as support and encourage during the course of my research. I also thank Prof. R.K. Sapru and Dr. R.K. Sharma, Member Senate and Syndicate, Panjab University, Chandigarh for their guidance and help in carrying out this work.

I am grateful to the Health Department, Punjab and the doctors and Para Medical Staff who co-operated me in carrying out this study.

I am particularly grateful to Vipin Sharma, GM(F&A), Punjab Health System Corporation for providing basic information.

I place on record my appreciation for the services rendered by the librarians of SEARO of WHO, New Delhi, IIPA, New Delhi, NIHFW, New Delhi and the Secretariat Library, Government of Punjab.

I owe with all humility whatever shortcomings in this work and earnestly hope that it would be of some help to the policy makers and planners in providing a system aimed at ensuring a decent health care for all.

SARWAN SINGH
