

## LIST OF FIGURES

Figure No.	Particulars	Page No.
1	Flow diagram of ricebran processing	2
2	Structure of phospholipids in rice bran lecithin	4
3	P-T diagram	10
4	Flow chart of lipid peroxidation by lipoxygenase	23
5	Structure of cholesterol	26
6	Boat and chair forms of cholesterol	30
7	Ring fusion structure of sterols	31
8	SCFE flow diagram	38
9	Total lipids collected Vs carbon dioxides Consumed (40°C, 50°C, 60°C) at 160 bar	52
10	Total lipids collected Vs carbon dioxides Consumed (40°C, 50°C, 60°C) at 220 bar	53
11	Total lipids collected Vs carbon dioxides Consumed (40°C, 50°C, 60°C) at 280 bar	54
12.	Predicted and experimental total lipid solubility's as function of pressure	57
13	Predicted and experimental total lipid solubility's as function of temperature	58
14	Three dimensional plot predicted response surface of total lipid solubility as a function of pressure and temperature	60
15	HPLC profiles of crude ricebran lecithin	63

16	HPLC profile of carbon dioxide extracted ricebran lecithin	66
17	HPLC profile of alcohol soluble ricebran lecithin	68
18	HPLC profile of alcohol insoluble ricebran lecithin	70
	Predicted phosphatidyl choline enrichment Vs time at Various extraction temperatures	
19	(i) Ethanol – lecithin ratio is 20 L / kg	74
20	(ii) ethanol lecithin ratio in 50 L / kg	75
21	(iii) Extraction time is 6 min	76
22	Contour plots showing effect of ethanol-lecithin ratio and time of extraction on predicted phosphatidyl Choline enrichment	78
23	Elution pattern of ricebran phospholipids	80
24	HPLC profile of purified phosphatidyl choline	81
25	GC profile of fatty acid composition of phosphatidyl choline from ricebran lecithin	82
26	Process flow chart for enrichment of PC in ricebran lecithin	83
27	GC profile of fatty acid composition of soy phosphatidyl choline	89
28	GC profile of fatty acid composition of egg phosphatidyl choline	90
29	HPLC analysis of soy PC liposomes	92
30	HPLC analysis of egg PC liposomes	93
31	HPLC analysis of ricebran PC liposomes	94
32	HLC analysis of PLPC-OOH in PC liposomes	95
33	HPLC analysis of fatty acids of soy PC liposomes	96
34	HPLC analysis of fatty acids of egg PC liposomes	97
35	HPLC analysis of fatty acids of ricebran PC liposomes	98

36	HPLC analysis of 18:2 – OOH in PC liposomes	99
37	Microscopic study	100
38	Kinetic studies –in the hydrolysis of PLPC – OH in soy PC liposomes by PLA <sub>2</sub>	101
39	Kinetic studies in the hydrolysis of PLPC – OOH in egg PC liposomes by PLA <sub>2</sub>	102
40	Kinetic studies in the hydrolysis of PLPC-OOH in ricebran PC liposomes by PLA <sub>2</sub>	103
41	Effect of cholesterol in the hydrolysis of PLPC- OOH in soy PC liposomal membrane by PLA <sub>2</sub>	105
42	Effect of cholesterol in the hydrolysis of PLPC-O(O)H in egg PC liposomal membrane by PLA <sub>2</sub>	106
43	Effect of cholesterol in the hydrolysis of PLPC-O(O)H in ricebran PC liposomal membrane	107
44	Effect of PLPC – OOH in the formation of fatty acids and 18:2-OOH in the hydrolysis of PLPC-OOH in soy PC liposomes	108
45	Effect of PLPC-OOH in the formation of fatty acids and 18:2-OOH in the hydrolysis of PLPC-OOH in egg PC liposomes	109
46	Effect of PLPC - OOH in the formation of fatty acids and 18:2-OOH in the hydrolysis of PLPC – OOH in ricebran PC liposomes	110
47	Calorimetric scan of 16:0/16:0-18:0/18:0 phosphatidyl choline	115

48	Calorimetric scans of 18:2/18:2-18:1/18:1 phosphatidyl choline	116
49	Calorimetric scans of 16:0/16:0- 18:0/18:0 phosphatidyl choline with increasing percentages of cholesterol	117
50	Calorimetric scans of 18:2/18:2 – 18:1 / 18:1 – phosphatidyl choline with increasing percentage of cholesterol	118
51	Calorimetric scans of egg PC liposomes with increasing percentage of cholesterol	119
52	Calorimetric scans of ricebran PC liposomes with increasing percentage of cholesterol	120
53	Calorimetric scans of soy PC liposomes with increasing percentage of cholesterol	121
54	Effect of cholesterol upon the energy contents of the phase transition in egg, ricebran and soy PC liposomes	123
