ACKNOWLEDGEMENT

Research is a creative task that extends the horizon of knowledge. I feel grateful to Almighty God for blessing me with an opportunity to realize my life-dream. Next only to Almighty God I am beholden to my true friend, philosopher and guide, Dr. Jamuna Prakash, Reader, Department of Food Science and Nutrition Manasagangotri, University of Mysore, but for whose tireless guidance, ceaseless support, immense help, together with unending love, sympathy and understanding, this work would never have been completed. Hence, it is my first duty to place on record my deepest sense of gratitude to Dr. Jamuna Prakash not merely for her in-depth critical study of my data but also for putting me on right lines to present all my findings in correct perspective. Her profound knowledge of the subject, rich and mature experience in guidance, and more than all her love, affection and understanding throughout the period of research were something superb, hardly to be expressed in words. Perhaps, tears of gratitude alone would convey a bit of my sentiments and feelings for her.

Dr. G. Saraswathi, former chairperson of Food Science and Nutrition Department of Mysore University and Dr. Shashikala Puttaraj, the present chairperson, do deserve my grateful thanks for extending all required help to me. Likewise, I could never forget the help I received from two other scientists Dr. A. Jyothilakshmi and Ms. Shyamala who cheerfully stepped in to assist me in sorting out the data. Friends and colleagues of mine of Maharani's College, Mysore, were indeed a source of great help to me and I thank them all for their kind support.

Thanks are also due to Dr. V. Prakash, Director, CFTRI, Mysore. I am also highly indebted to the CFTRI Librarian for his permission to utilize the library material.

The main motivating factor for the entire project was the University Grants Commission, New Delhi, who should figure top in my list of gratitude for their kind sanction of a fellowship to me under their IX Plan and X Plan Faculty Improvement Programme (FIP) which enabled me to objectify my dream of research for Ph.D. Degree of Mysore University. I am equally thankful to the Government of Karnataka, to the Director of Collegiate Education in Bangalore, to the Principal of Maharani's Science College, Mysore, and to the Manager and all the Office Staff of Maharani's Science College, Mysore, for relieving me from teaching work to
do research. The University of Mysore in general and the Registrar (Evaluation) together with Director, College Development Council, in particular, do deserve my special thanks not only for registering me as a Ph.D. candidate but also for processing a mundane set of rules for this programme.

I would be failing in my duty if I do not sufficiently thank the authorities of Sultan Shaheed Education Trust, Mysore for placing all their educational institutions at my disposal as a rich yard for me to collect the data. The staff, the students, the children, the parents of Ghouseinanagar, the slum area of Mysore City, have all been very generous in extending their full support and co-operation to me in my very difficult but basic task of obtaining first-hand primary source material for my research. I thank them immensely times for their very precious help, particularly of the children. The Secretary of the Trust, Sri T.C. Muneer Pasha and his family were a source of great help to me.

Last but not the least, I owe a debt of gratitude to several members of my own family, such as my sister, brothers, brother-in-law, aunts, uncles, nieces and son for their endless support, priceless love and encouragement. With respectful regards dedicate this to my beloved parents, Prof. B. Sheik Ali and Mrs. Sufia Bi.
