LIST OF TABLES

3. REVIEW OF LITERATURE

3.1 Contribution of key diet factors to diet related non-communicable disease – population attributable risk (%)
3.2 Estimated prevalence (%) and number (millions) of stunted children from 1985 to 2005
3.3 Stunting and share of work affected in India and China – Comparison of two countries, 1995 and 2005 (%)
3.4 Mean of I.Q of children by forms of malnutrition
3.5 Component analysis of coefficient of determination for I.Q with anthropometric measurements
3.6 Energy intake and Educational Performance of students
3.7 Riboflavin deficiency prevalence among low income group children
3.8 Percentage prevalence of nutritional deficiency and disorders among 0-6 years children in pre and post intervention periods
3.9 Average food consumption according to age (18 States/UTs)
3.10 Average intake of nutrients as percent of RDA (18 States/UTs)
3.11 Effect of supplementation of vitamin A through natural foods and retinol solution on serum retinol and haemoglobin levels of children
3.12 Consumption of food stuffs/Cu/day in relation to per capita income
3.13 Nutritional status of children in relation to economic status
3.14 Living conditions and morbidity profile of children
3.15 Maternal literacy and child health indicators
3.16 Perceived importance of various child caring and related practices for reducing undernutrition in children by nutritionists

4. METHODOLOGY

4.1 Age wise distribution of children (number) for the study
4.2 Grades of Malnutrition based on Gomez classification
4.3 Nutritional grades based on body mass index
4.4 Z-Score classification of children
4.5 Criteria for classifying children into different grade of malnutrition
4.6 Hemoglobin values defining anemia at sea level
4.7 Economic levels of the families based on food expenditure
4.8 Literacy levels of mothers of children
4.9 Categorization of families based on size
5. RESULTS AND DISCUSSION

5.1. Situation analysis of study area

5.1.1. Educational pattern of selected families
5.1.2. Occupation status of selected families
5.1.3. Differential vulnerability of slums for various criteria
5.1.4. Nutritional status of children in relation to sex (number of subjects)
5.1.5. Nutritional status of children – Agewise distribution (number of subjects)
5.1.6. Anthropometric profile of 2-11 year children
5.1.7. Mid upper arm circumference of children in relation to age (in percent)
5.1.8. Skin fold thickness of children in relation to age
5.1.9. Prevalence of anemia in children in relation to age
5.1.10. Nutritional status of mothers of selected children

5.2. Dietary pattern of children and associative factors

5.2.1. Frequency of consumption of grains and other foods by selected families (in percent, n=200)
5.2.2. Frequency of consumption of vegetables by selected families (in percent, n=200)
5.2.3. Mean food intake of boys in relation to age (g/day)
5.2.4. Mean food intake of girls in relation to age (g/day)
5.2.5. Proportion of proteins from plant and animal foods
5.2.6. Energy protein ratio (EPR) of diets of children of different age groups
5.2.7. Energy protein adequacy of diets in relation to various maternal and child factors
5.2.8. Percentage of iron derived from different food groups
5.2.9. Percent adequacy of nutrients of children in relation to their nutritional status
5.2.10. Percent adequacy of nutrient intake of children in relation to their age
5.2.11. Percent adequacy of nutrient intake of children - Sexwise distribution
5.2.12. Percent adequacy of nutrients of children in relation to maternal nutritional status
5.2.13. Percent adequacy of nutrient intake of children in relation to maternal nutritional intake
5.2.14. Percent adequacy of nutrient intake of children in relation to literacy status
5.2.15. Percent adequacy of nutrient intake of children in relation to economic status
5.2.16. Percent adequacy of nutrients of children in relation to their family size
5.2.17. Percent adequacy of nutrients of mothers in relation to maternal nutritional status

5.3. **Growth pattern of children: A longitudinal profile through anthropometry**

5.3.1. Nutritional profile of children selected for longitudinal study (n=360)
5.3.2. Growth profile (weight/age) of children in the study period in relation to age (Gomez classification)
5.3.3. Weight for age of children in comparison to NNMB data of rural children
5.3.4. Weight for age of children during four year period (in percent)
5.3.5. Weight for age of children in relation to age and sex
5.3.6. Growth profile (height/age) of children in the study period in relation to age (Waterlow's classification)
5.3.7. Height for age according to Z score classification during four year period (percentage of children)
5.3.8. Comparison of average height (cm) of children with NNMB data
5.3.9. Height for age of children in relation to age and sex
5.3.10. Weight for height of children during four year period (in percent)
5.3.11. Weight for height of children in relation to age and sex
5.3.12. Mid upper arm circumference (in mm) of the children for the study period
5.3.13. Mid upper arm circumference in relation to age for four years (as percent of standard)
5.3.14. Mid upper arm circumference of children in comparison to NNMB data of rural children
5.3.15. Percentage of standard of mid upper arm circumference in relation to age and sex
5.3.16. Mean SFT (mm) of children over four years of follow-up
5.3.17. Skinfold thickness in relation to age for four years (as percent of standard)
5.3.18. Skinfold thickness of children in comparison to NNMB data of rural children
5.3.19. Percentage of standard of SFT in relation to age and sex

5.4. **Nutritional status of children and Associative factors**

5.4.1. Nutritional status of children in relation to economic status
5.4.2. Nutritional status of children in relation to maternal literacy status
5.4.3. Nutritional status of children in relation to family size
5.4.4. Nutritional status of children in relation maternal BMI
5.4.5. Categorization of mothers based on the scores obtained for nutrition knowledge (n=338)
5.4.6. Nutrition knowledge and level of reasoning (percent of subjects)
5.4.7. Knowledge regarding feeding and child care (percent of subjects)
5.4.8. Health knowledge and practice (percent of subjects)
5.4.9. Hygiene and Sanitation (percent of subjects)
5.4.10. Parental characteristics (percent of subjects)
5.4.11. Nutritional status of children (weight/age) in relation to mother’s nutrition knowledge
5.4.12. Nutritional status of children (weight/age) in relation to parental characteristics
