CONTENTS

Glossary of Indian Terms ix - x
List of Maps and Diagrams xi - xiv
List of Plates xv
Tables in the Text xvi-xvii
Tables in the Appendix xvii-xviii
INTRODUCTION xix-xxv

Part I: Geographical Setting
Chapter I Physical Setting 1-48

Section A: Physiography & Soils:
Situation, Area, Surface features,
Water table, Drainage, Changes in
the River courses, Jhils, Soils,
Land Revenue classification of soils,
Loams or Dumat soils, Clays or
Matlyar soils, Silts or khadar soils,
Sands or Bhur soils, Cultural
influence on soils, Physiographic Units.

Section B: Climate & Natural Vegetation:
Vagaries of rainfall, monthly rainfall,
Season of retreating monsoons, Winter
season, Dry hot season, Evaporation
and Precipitation effectiveness, Tracts
of climate, Natural vegetation.

Chapter II Cultural Setting 49-93

Section A: The People:
Distribution of population, Density
of population, Rural-urban population ratio, Growth of population, Households, Male female ratio, Age structure, Livelihood pattern, Peasant communities, Non-agricultural occupations, Industries, Effects of the population increase.

Section B: Means of Communication & Transport:
Roads, Railways, Accessibility, Means of transport, Effects of the development of transport.

Section C: Irrigation:

Part III: Patterns of Land Use

Chapter III The Arable Land 94 - 137

Main types of land use, Trends of the arable land, Fallow, Factors influencing the progress and distribution of arable: (A) Influence of Physiographic conditions, (B) Influence of rainfall, (C) Influence of cultural conditions.
Agrarian structure, Land tenure, Tenancy, Abolition of zamindaris, Land holdings, Consolidation of holdings, Field layout,
Motives of crop production, Main crops, Trends of crop production, Factors influencing the distribution of crops, Cultural practices:
(a) Single cropping (b) Mixed cropping, Factors of mixed cropping, A kharif mixture, (c) Double cropping (d) Crop rotation

Wheat: Importance of wheat, Varieties, Sowing season, Harvesting season, Soil requirements, Irrigation of wheat, Mixed cropping with wheat, Seed rate, Crop rotation, Weeds, Diseases, Distribution of wheat cultivation, Trend of wheat cultivation

Barley, Gram, Peas, Masur, Kharif pulses

Rice: Varieties, Factors controlling rice cultivation, Distribution of rice cultivation, Sowing and harvesting season, Seed rate, Diseases, Double cropping & crop rotation with rice, Trend of rice cultivation

Bajra: Factors influencing the cultivation of Bajra, Mixed cropping with bajra, Distribution of bajra cultivation, Trends of bajra cultivation, Seed rate & cultural practices, Diseases of bajra

Jowar: Factors influencing the cultivation of jowar,
Distribution of jowar, fodder jowar, other fodder crops

Maize: Uses of maize, Varieties of maize, Growing season, Irrigation of maize, Seed rate and intercultivation practices, Double and mixed cropping with maize, Distribution of maize

Minor Food Grains

Sugarcane: Varieties of sugarcane, Factors influencing the cultivation of sugarcane, Distribution of sugarcane cultivation

Oilseeds: Distribution of oilseeds

Fibre Crops: Cotton, Distribution of cotton, Trend of cotton cultivation, Hemp, Jute, Sann

Market Gardening: The market garden produce, Trend of market gardening

Orchards & Groves: A minor type of land use, variety of fruit, Distribution of fruit orchards, Factors influencing orchard planting

Chapter V Types of Farming 219-253

Type A. Mixed farming based on foodgrains and feed crops

Type B. Irrigated mixed farming based on foodgrains feed crops

Type C. Mainly cash crop farming based on sugarcane

Type D. Mainly cash crop farming based on potatoes, fruit and vegetables

Type E. Varied farming
Factors affecting the localization of farming types

Crop Associations: Crop associations of the Ganga khadar, Crop associations of the Ramganga khadar, Crop associations of the Trans-Ramganga tract, Crop associations of the Central uplands, Crop associations of the Suburban areas

Crop Regions:

Changes in Crop Pattern

Utilization of land under water

Reclamation of wastelands or Banjars: Trends of wastelands

Chapter VI Carrying Capacity of Land 254 - 272

Nature of investigation, yield per acre, Carrying capacity of land, Composition of daily food intake, Influence of the composition of food intake on the carrying capacity of foodgrain land, Carrying capacity per cropped acre, Carrying capacity per gross acre, Foodgrain deficiency, Non-food requirements, Influence of cultural advancement on the carrying capacity of land, Uneconomic holdings, Rural indebtedness, Measures adopted by people to improve their lot and their scope, Sources of non-agricultural incomes
Area under settlements, Nature of settlements, Trend of settlements, Factors affecting the selection of sites, Accessibility as a factor in selection of sites, Village plans, Hamlets, Houses, Factors influencing house types, Contrast in the requirements of the urban and the rural settlements

Urban Settlements: (a) Moradabad, (b) Amroha, (c) Sambhal, (d) Chandausi

Trend of land use by the larger urban settlements, Hasanpur, Bachhraon-Dhanaura, Land requirements of graveyards, The land under roads and railways

Part III: Problems and Planning

Soil problems, Problems of weather and climate, The problem of floods, Defective drainage, Problems of irrigation, Heavy pressure of population on land

Problems of Agrarian Structure: Land taxation, Level of technology, Lack of capital and resources, other problems

Agricultural Inefficiency: Low per acre yields, Low yield per head of rural population, Contrast with some better farmed countries.
Chapter IX  Planning the Land use  339 - 413

Some basic principles of land use planning,
Attempts at Planning up-to-date: Grow More Food Campaign, Five Year Plans
Suggestions for Planning the Land use: Planning land use at the family and village levels
Potential Yields: (A) Evidence of Crop Competitions (B) Evidence of Crop Cutting Trials (C) Evidence of Agricultural Research (D) Evidence of Improved Techniques
Conclusion from the above noted evidence
Determination of the minimum family holding for efficient farming
Land Planning through Cooperative Farming
Land use Planning at the Micro-regional or Block level
Classification of land
Land use Planning at the district level: Change in diet habits, Animal husbandry, Industries and other services, Housing, Land requirements of roads, railways, irrigation and drainage, Planning the development of rural centres.

Land use Planning at the higher levels:

SUMMARY AND CONCLUSION

Appendices

Appendix I: Introduction to the Sample Villages:
Bahadurpur, Khabri Gandu, Pahladpur, Naglia Kathair, Semli, Nizam Nagla, Khaliqpur Kalan, Khidmatpur, Latifpur, Chaki Khera, Bagarhpur Chholiya, Matena Old, Matena New, Bhagwanpur Khadar, Birpur Baryar, Machharya, Ramnawala, Tikhunti, Daulet Bagh, Hauz Badesra

Appendix II: Soil studies in the adjoining tracts
Appendix III: Relevant data in tables
Appendix IV: Distt. II Five Year Plan (A brief sketch)
Appendix V: U.P. Method of wheat cultivation
