</tbody>
</table>
2.11 Number of fathers (in percent) in different age range of control and Down syndrome families (C=Control, DS= Down syndrome).

2.12 Number of grandmothers (in percent) in different age range of Control and Down syndrome families (C=Control, DS= Down syndrome).

2.13 Number of grandfathers (in percent) in different age range of control and Down syndrome.

2.14 Distribution of parental age and number of children born (in percent) to control and Down syndrome families (C=Control, DS= Down syndrome).

2.15 Distribution of maternal grandparental age and number of children born (in percent) to control and Down syndrome families (C=Control, DS= Down syndrome).

2.16 The comparison of parental and maternal grandparental age and number of children born (in percent) to control and Down syndrome families at different age range (C=Control, DS= Down syndrome).

2.17 Pedigrees of control families of young age mothers. (a) 19 years age mother and (b) 27 years age mother. The Roman number in the left side of the figure indicates the number of generation. The Arabic number below the symbol denotes the number of individual in the generation. The number inside the symbol of grandmother represents the age when she gave birth to the
mother of controls. The number inside the symbol of father and mother in the 2nd generation indicates their age when they gave birth to the child indicated by an arrow. These are the representative pedigrees out of 200 control families.

2.18 Pedigrees of control families of advanced age mother. (a) 33 years age mother, (b) 38 years age mother and (c) 42 years mother. The Roman number in the left side of the figure indicates the number of generation. The Arabic number below the symbol denotes the number of individual in the generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of controls. The number inside the symbol of father and mother in the 2nd generation indicates their age when they gave birth to the child indicated by an arrow. These are the representative pedigrees out of 200 control families.

2.19 Pedigrees of Down syndrome children of young age mother: (a) 18 years of age mother and (b) 26 years of age mother. The Roman number in the left side of the figure indicates the number of generation. The Arabic number below the symbol denotes the number of individual in the generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of Down syndrome. The number inside the symbol of father and mother in the 2nd generation indicates their age when they gave birth to Down syndrome child. These
are the representative pedigrees out of 150 Down syndrome families.

2.20 Pedigrees of Down syndrome children of advance age mother: (a) 33 years age mother, (b) 37 years age mother and (c) 41 years age mother. The Roman number in the left side of the figure indicates the number of generation. The Arabic number below the symbol denotes the number of individual in the generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of Down syndrome. The number inside the symbol of father and mother in the 2nd generation indicates their age when they gave birth to Down syndrome child. These are the representative pedigrees out of 150 Down syndrome families.

2.21 Pedigrees of Down syndrome children born to young age mother by consanguinity: (a) 19 years age mother and (b) 26 years age mother. The Roman number in the left side of the figure indicates the number of generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of Down syndrome. The number inside the symbol of father and mother in the 2nd generation indicates their age when they gave birth to Down syndrome child. These are the representative pedigrees out of 53 Down syndrome families with consanguinity.
2.22 Pedigrees of Down syndrome children born to advanced age mother by consanguinity. (a) 33 years age mother by consanguinity, (b) 38 years age mother and (c) 41 years age mother. The Roman number in the left side of the figure indicates the number of generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of Down syndrome. The number inside the symbol of father and mother in the 2\textsuperscript{nd} generation indicates their age when they gave birth to Down syndrome child. These are the representative pedigrees out of 53 Down syndrome families with consanguinity.

2.23 G-banded metaphase plate (a) and karyotype (b) of Turner syndrome (2n=45, XO) (arrow denotes X chromosome).

2.24 G-banded metaphase plate (a) and karyotype (b) of Klinefelter syndrome (2n=47, XXY) (arrows denote X chromosomes).

2.25 Number of mothers (in percent) in different age range of control and sex chromosomal aneuploidy families (C=Control, SA= Sex chromosomal aneuploidy).

2.26 Number of fathers (in percent) in different age range of sex chromosomal aneuploidy and control families (C=Control, SA= Sex chromosomal aneuploidy).

2.27 Number of grandmothers (in percent) in different age range of control and sex chromosomal aneuploidy families (C=Control, SA= Sex chromosomal aneuploidy).
2.28 Number of grandfathers (in percent) in different age range of control and sex chromosomal aneuploidy families (C=Control, SA= Sex chromosomal aneuploidy).

2.2 Distribution of parental age and number of children born (in percent) to control and sex chromosomal aneuploidy families (C=Control, SA= Sex chromosomal aneuploidy).

2.29 Distribution of grandparental age and number of children born (in percent) to control and sex chromosomal aneuploidy families (C=Control, SA= Sex chromosomal aneuploidy).

2.31 The comparison of parental and grandparental age and number of children born (in percent) to control and sex chromosomal aneuploidy families at different age range (C=Control, SA= Sex chromosomal aneuploidy).

2.32 Pedigrees of control families of young age mothers. (a) 22 years age mother and (b) 25 years age mother. The Roman number in the left side of the figure indicates the number of generation. The Arabic number below the symbol denotes the number of individual in the generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of controls. The number inside the symbol of father and mother in the 2nd generation indicates their age when they gave birth to child shown by the arrow. These are the representative pedigrees out of 100 control families.
2.33 Pedigrees of control families of advanced age mothers. (a) 33 years age mother and (b) 37 years age mother. The Roman number in the left side of the figure indicates the number of generation. The Arabic number below the symbol denotes the number of individual in the generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of controls. The number inside the symbol of father and mother in the 2nd generation indicates their age when they gave birth to child shown by the arrow. These are the representative pedigrees out of 100 control families.

2.34 Pedigrees of Turner syndrome children at different age range of mothers. (a) 24 years age mother, (b) 26 years age mother and (c) 32 years age mother. The Roman number in the left side of the figure indicates the number of generation. The Arabic number below the symbol denotes the number of individual in the generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of Turner syndrome. The number inside the symbol of father and mother in the 2nd generation indicates their age when they gave birth to Turner syndrome child. These are the representative pedigrees out of 16 Turner syndrome families.
2.34 Pedigrees of Klinefelter syndrome children at different age range of mothers (a) 20 years age mother, (b) 28 years age mother and (c) 34 years age mother. The Roman number in the left side of the figure indicates the number of generation. The Roman number in the left side of the figure indicates the number of generation. The Arabic number below the symbol denotes the number of individual in the generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of Klinefelter syndrome. The number inside the symbol of father and mother in the 2nd generation indicates their age when they gave birth to Klinefelter syndrome child. These are the representative pedigrees out of 9 Klinefelter syndrome families.

2.36 Pedigrees of Turner syndrome children shows consanguinity. (a) 24 years age mother, (b) 28 years age mother and (c) 35 years age mother. The Roman number in the left side of the figure indicates the number of generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of Turner syndrome. The number inside the symbol of father and mother in the 2nd generation indicates their age when they gave birth to Turner syndrome child. These are the representative pedigrees out of 16 Turner syndrome families.
2.37 Pedigrees of Klinefelter syndrome children shows consanguinity. (a) 23 years age mother, (b) 27 years age mother and (c) 33 years age mother. The Roman number in the left side of the figure indicates the number of generation. The Arabic number below the symbol denotes the number of individual in the generation. The number inside the symbol of grandmother represents the age when she gave birth to the mother of Klinefelter syndrome. The number inside the symbol of father and mother in the 2\textsuperscript{nd} generation indicates their age when they gave birth to Klinefelter syndrome child. These are the representative pedigrees out of 9 Klinefelter syndrome families.

2.38 Comprehensive model to explain the possible causative factors and management of aneuploidy.
