# List of Figures

**Figure 1.1:** Plot of energy band gap against lattice parameter for some common semiconductors ........................................ 5

**Figure 1.2:** Illustration of the wurtzite crystal structure .................. 10

**Figure 1.3:** Energy band diagram of individual metal and semiconductor (a) with $\phi_m > \chi_s$ (b) with $\phi_m < \chi_s$ ............................... 15

**Figure 1.4:** Energy band diagram for intimate metal-semiconductor (a) with $\phi_m > \chi_s$ (rectifying) and (b) with $\phi_m < \chi_s$ (ohmic) .... 18

**Figure 1.5:** Energy Band diagram for interface state model ............. 21

**Figure 1.6:** Schematics of band diagrams and carrier transport mechanism in metal-n-type semiconductor .......................... 24

**Figure 1.7:** A schematic of TLM test structure ............................... 26

**Figure 1.8:** A plot of the total resistance ($R_T$) as a function of spacing between pads (d) ...................................................... 27

**Figure 1.9:** Schematic diagram showing the C-TLM pattern ............ 28

**Figure 2.1:** The process of Auger electron emission ....................... 40

**Figure 2.2:** Schematic of Auger depth profiling .............................. 40

**Figure 2.3:** X-ray diffraction by a crystal ..................................... 41

**Figure 2.4:** Schematic of atomic force microscope .......................... 42

**Figure 2.5:** Secondary electron emission in scanning electron microscopy .......................................................... 45

**Figure 2.6:** Energy-band diagram of metal n-type semiconductor ...... 47

**Figure 3.1:** The typical I-V characteristics of Pt/Ag/Au contacts on p-type GaN as a function of annealing temperature, measured between the CTLM pads with a spacing of 6 $\mu$m .......................... 57
Figure 3.2: Plots of the measured total resistance ($R_t$) versus the spacing between the CTLM pads as a function of temperature .................................................................57

Figure 3.3: AES depth profiles of the Pt/Ag/Au ohmic contacts on p-type GaN before and after annealing: (a) as-deposited, and (b) annealed at 800 °C ......................................................58

Figure 3.4: X-ray diffraction plots of the Pt/Ag/Au ohmic contacts to p-type GaN before and after annealing: (a) as-deposited, and (b) annealed at 800 °C ......................................................60

Figure 3.5: AFM images of the Pt/Ag/Au contacts on p-type GaN before and after annealing: (a) as-deposited, and (b) annealed at 800 °C .................................................................61

Figure 3.6: The I-V characteristics of the Ti (12nm)/W (20nm)/Au (50nm) contacts on n-type GaN as a function of the annealing temperature ........................................68

Figure 3.7: Plot of $F(V)$ versus $V$ for Ti/W/Au contacts. It is shown that annealing leads to a large reduction (by ~160 meV) in the SBHs for Ti/W/Au contacts, compared with that of the as-deposited contacts .................................................69

Figure 3.8: Plot of $I/[1-\exp(-qV/kT)]$ versus $V$ for Ti/W/Au contacts. It is shown that annealing leads to a large reduction (by ~160 meV) in the SBHs for Ti/W/Au contacts, compared with that of the as-deposited contacts .................................................70

Figure 3.9: AES depth profiles of the Ti/W/Au ohmic contacts to n-GaN: (a) as-deposited, (b) after annealing at 750 °C and (c) after annealing at 900 °C .................................................72

Figure 3.10: Glancing angle XRD plots of the Ti/W/Au contacts: (a) annealed at 550 °C and (b) annealed at 900 °C ...............73

Figure 3.11: Typical HERM image for the Ti/W/Au contact to n-GaN after annealing at 900 °C .................................................74

Figure 3.12: (a) STEM images obtained from the Ti/W/Au contact on n-GaN after annealing at 900 °C (b) EDX line profile spectra
showing the element distribution across the contact after annealing at 900 °C ........................................75

**Figure 3.13:** The specific contact resistance of the Ti/W/Au contacts as a function of the annealing time at 900 °C .......................76

**Figure 3.14:** The AFM images of the Ti/W/Au contacts on n-GaN: (a) as-deposited and (b) after annealing at 900 °C ..................77

**Figure 3.15:** Schematic energy-band diagram for the metal-semiconductor interface: (a) conduction and valence bands without band bending, and (b) conduction and valence bands with band bending due to the presence of nitrogen vacancies $V_N$.................................................................78

**Figure 4.1:** Current-voltage characteristics of Rh Schottky contacts on n-type GaN as a function of annealing temperatures.........87

**Figure 4.2:** Current-voltage characteristics of Rh/Au Schottky contacts on n-type GaN as a function of annealing temperatures....87

**Figure 4.3:** The plot of $I/[1-\exp(-qV/kT)]$ against. $V$ for Rh Schottky contacts annealed at different temperatures ...............89

**Figure 4.4:** The plot of $I/[1-\exp(-qV/kT)]$ against. $V$ for Rh/Au Schottky contacts annealed at different temperatures ...............89

**Figure 4.5:** Plot of $F(V)$ versus $V$ for the Rh Schottky contacts annealed at different temperatures.................................90

**Figure 4.6:** Plot of $F(V)$ versus $V$ for the Rh/Au Schottky contacts annealed at different temperatures.................................90

**Figure 4.7:** A plot of $1/C^2$ versus $V$ for Rh Schottky contacts annealed at different temperatures.......................................92

**Figure 4.8:** A plot of $1/C^2$ versus $V$ for Rh/Au Schottky contacts annealed at different temperatures.......................................92

**Figure 4.9:** The barrier heights and diode ideality factors of Rh Schottky contact as a function of annealing temperature..............96
Figure 4.10: The barrier heights and diode ideality factors of Rh/Au Schottky contact as a function of annealing temperature.................................................................96

Figure 4.11: Auger depth profile of the Rh/Au Schottky contact to n-type GaN: (a) as-deposited, (b) annealed at 400 °C, and (c) annealed at 500 °C.................................................................98

Figure 4.12: The XRD plot of the Rh/Au Schottky contact to n-type GaN: (a) as-deposited sample (b) 400 °C annealed sample and (c) 500 °C annealed sample.................................................................99
