List of Tables

Table 3.1 Summary of the classification results in terms of accuracy, precision and recall measures obtained for all the three shape representation schemes.

Table 3.2 Class-wise CP, FN, FP, CN, accuracy, precision and recall values obtained for the representation scheme-1 (Section 2.2.2.1).

Table 3.3 Class-wise CP, FN, FP, CN, accuracy, precision and recall values obtained for the representation scheme-2 (Section 2.2.2.2).

Table 3.4 Class-wise CP, FN, FP, CN, accuracy, precision and recall values obtained for the representation scheme-3 (Section 2.2.2.3).

Table 3.5 Mean and Standard deviation of the pairwise similarity values obtained due to the three representation schemes on the shapes shown in Fig. 2.11.

Table 4.1 A distance matrix of 10 patterns.

Table 4.2 Mutual Neighbourhood Value (Gowda and Krishna, 1977) of the 10 patterns obtained from Table 4.1.

Table 4.3 Nearest Neighbourhood Matrix of the 10 patterns.

Table 4.4 Nearest Neighbourhood Matrix.

Table 4.5 Summary of the clustering results in terms of accuracy, precision, recall and Hubert’s Tau (T) statistical measures obtained for all the three representation schemes.

Table 4.6 Cluster-wise accuracy, precision and recall values obtained using representation scheme-1 (Section 2.2.2.1).

Table 4.7 Cluster-wise accuracy, precision and recall values obtained using representation scheme-2 (Section 2.2.2.2).

Table 4.8 Cluster-wise accuracy, precision and recall values obtained using representation scheme-3 (Section 2.2.2.3).

Table 5.1 Category wise number of correct positives at the top 10 positions using representation scheme-1 (Section 2.2.2.1).

Table 5.2 Category wise number of correct positives at the top 10 positions using representation scheme-2 (Section 2.2.2.2).

Table 5.3 Category wise number of correct positives at the top 10 positions using representation scheme-3 (Section 2.2.2.3).
Table 5.4 Overall precision-recall gain for varying dimension (n) using representation scheme-1.

Table 7.1 Summary of classification results in terms of accuracy, precision and recall measures obtained for Zernike Moments based shape representation.

Table 7.2 Comparison of the proposed clustering methodologies with Zernike moments based approach in terms of accuracy, precision, recall and Hubert’s Tau statistics.

Table 7.3 Performance of the proposed shape retrieval methods and the Zernike moments based method in terms of precision-recall measure.

Table 7.4 Overall precision-recall gain of the proposed shape retrieval methods and the Bernier and Landry (2003) method.

Table 7.5 Clustering results for Iris data due to the proposed approach.

Table 7.6 Clustering results for Zoo data due to the proposed approach.

Table 7.7 Clustering results for Wine data due to the proposed approach.

Table 7.8 Clustering results of Yong et al. (2005) algorithm on Wine data.

Table 7.9 Clustering results of CURE for Wine Data.

Table 7.10 Clustering results of CURE for Wine Data after shrinking pre-processing with \( \alpha = 0.3 \) and \( r = 30 \).

Table 7.11 Clustering results obtained by all four methods for Iris data.

Table 7.12 Clustering results obtained by all four methods for Zoo data.

Table 7.13 Clustering results obtained by all four methods for Wine data.

Table 7.14 Similarity matrix for fat-oil data.

Table 7.15 Nearest Neighbourhood Matrix of fat-oil data.

Table 7.16 Similarity matrix for Microcomputer data.

Table 7.17 Clusters suggested by human experts for city temperature data.

Table 7.18 Clusters obtained by the proposed methodology for city temperature data.

Table 7.19 Results based comparison on symbolic data sets.
