ACKNOWLEDGEMENTS

First and foremost I would like to thank Institute of Bioresources and Sustainable Development (IBSD), Department of Biotechnology, Government of India, Imphal for funding this project. At this moment of accomplishment, my deepest appreciation goes to my supervisor and guide, Dr. Narayan Chandra Talukdar, Director, Institute of Bioresources and Sustainable Development, Imphal, for his excellent supervision, support, encouragement, creation of research environment for execution of the work and the freedom I needed to move on. He continually and convincingly conveyed a spirit of research thoughts and life philosophy. Without his great effort of guidance and persistent help this thesis would not have been possible.

I am also extremely indebted to my guide Professor Mohan Chandra Kalita, Department of Biotechnology, Guwahati University, for his support, understanding and care during the course of my research work.

I take this opportunity to sincerely acknowledge and thank Dr. Virendra Singh Rana, ICAR, New Delhi who has created a baseline programme for this research work. He was the one who actually initiated the idea and information to work on Oroxyllum indicum and Cephalotaxus griffithii. Unfortunately, he left IBSD before the idea was conceptualized in the form of a Ph.D. synopsis.

Cancer cell based experiments were one of the basic requirements of my Ph.D. work. I take this opportunity to offer heartfelt thanks to Dr. Utpal Bora and his team namely Dr. Naresh Kasoju, Mr. Arghya Sett and Mr. Ratul Das Department of
Biotechnology, IIT, Guwahati for guiding me to learn animal cell culture techniques in their laboratory.

I gratefully acknowledge Dr. Jagat Chandra Borah for providing me short cut techniques during column chromatography experiment. I acknowledge with a pleasant feeling in my heart that his guidance in natural product chemistry which forms a part of this thesis was spontaneously flowing during the execution of laboratory experiments. I also extend my thanks to Dr. Bikash Chandra Pal for his meticulous help in elucidation of compound structure. It was only a stroke of fair fortune that I had the privilege of exposure to his wealth of knowledge in Natural Product Chemistry. A thorough understanding about HPLC techniques were learnt and accomplished under his guidance. My gratitude is also extended to Dr. Langoljam Reena for extending her helping hand in natural product chemistry experiments.

My thanks and appreciation also goes to my colleague, Miss Laishram Surbala. The joy and interest she has provided in my research was unusual and extraordinary support.

I consider it an honour to have received the guidance of Dr. Niranjan Chakraborty, National Institute of Plant Genome Research, New Delhi, though for a brief period, in learning molecular biology techniques and of Dr. Satish K Gupta, National Institute of Immunology, New Delhi, in doing flow cytometry analysis in their laboratories. My gratitude is also extended to Dr. Pankaj Suman, NII, New Delhi for giving me a hands-on support in flow cytometry experiments.

I would like to thank Dr. Biseshwori Thongam for identification of the plant material, Mr. Dia Eraijao for locating the plant material and Mr. N. Surjit Singh for helping during plant material collection in the field.
I would also like to thank my childhood friend Mr. Elangbam Devdutt and his wife Ms. Elangbam Babita for providing accommodation in their flat during my stay in Delhi for carrying out research work. Besides, I would like to thank several people who knowingly and unknowingly helped me during the course of my research work.

(Moirangthem Dinesh Singh)
