Studies towards the synthesis of Tubulysin, Torrubiellutin and N-Acyl sulfonamides, carabamates

ABSTRACT

CHAPTER-I

Section-I is divided into two sections

SECTION-A: Introduction to ‘tubulin polymerization inhibitors’

1.1. Introduction
1.2. Applications
1.3. References

SECTION-B: Formal total synthesis of tubulin polymerization inhibitor-
‘tubulysin U & V’

1.4. Introduction
1.5. Isolation
1.6. Previous approaches
1.7. Present work
1.8. Experimental
1.9. References

Spectra

CHAPTER-II

: Total synthesis of C-5 epimer of anticancer natural product-
‘torrubiellutin C’

2.1. Introduction
2.2. Isolation
2.3. Present work
2.4. Experimental
2.5. References

Spectra
CHAPTER-III  Chapter-III is divided into two sections

SECTION-A  Synthesis of N-acyl sulfonamides under Lewis acid catalysis  118-155

3.1. Introduction
3.2. Previous approaches
3.3. Present work
3.4. Experimental
3.5. References
   Spectra

SECTION-B  Synthesis of N-acyl carbamtes under Lewis acid catalysis  156-180

3.6. Introduction
3.7. Previous approaches
3.8. Present work
3.9. Experimental
3.10. References
   Spectra
