LIST OF TABLES

Table 1: Species of *Xenorhabdus* and *Photorhabdus* and their respective nematode symbionts, *Steinernema* and *Heterorhabditis* species.

Table 2: Major characteristics distinguishing *Xenorhabdus* spp. and *Photorhabdus* spp.

Table 3: Pattern of Pesticide consumption in India.

Table 4: Consumption pattern of biocontrol agents in India.

Table 5: Sources of Entomopathogenic nematodes and associated bacteria.

Table 6: Determination of protein content of fractions eluted from DEAE column.

Table 7: Biochemical tests of four indigenous isolates of *Xenorhabdus*.

Table 8: Quantification of genomic DNA by Spectrophotometry.

Table 9: Average percent similarity among the four *Xenorhabdus* isolates w.r.t. restriction enzymes.

Table 10: Number of polymorphic bands provided with the isolates used for percentage similarity analysis.

Table 11: Percentage of primer producing scoreable bands with four indigenous *Xenorhabdus* isolates.

Table 12: Average percent similarity between isolates using different RAPD primers.

Table 13: Effect of culture media on toxin production.

Table 14: Protein yield of *Xenorhabdus* isolate at various time intervals in different media.

Table 15: Effect of Incubation temperature on culture growth.
Table 16: Isolation of crude toxin by fermentation.

Table 17: Summary of isolation and purification of toxin at various stages of purification.

Table 18: Cultural characteristics of four *Xenorhabdus* (SCX3, SCX6, SCX7 and SCX8) bacterial isolates.

Table 19: Determination of protein content of fractions collected during the stages of Gel filtration.

Table 20: Effect of pH on activity of Toxin.

Table 21: Effect of temperature on activity of Toxin.

Table 22: Toxicity of toxin from *Xenorhabdus nematophilus* in semisynthetic diet to the neonates of *S. litura*.

Table 23: Molt inhibiting concentrations of toxin from *Xenorhabdus nematophilus* in semisynthetic diet to the neonates of *S. litura*.
