LIST OF FIGURES

Fig. 1: Generalized life cycle of entomopathogenic nematodes, *Steinernema* spp. and *Heterorhabditis* spp.

Fig. 2: Pesticide Consumption by different crops in India.

Fig. 3: Collection of Infective Juveniles from the dead larvae of *Galleria mellonella* on the white trap.

Fig. 4: Isolation of indigenous *Xenorhabdus* bacterial isolates.

Fig. 5: *Xenorhabdus* bacterium on Mac-conkey agar.

Fig. 6: Primary and secondary forms of *Xenorhabdus* bacterium on nutrient agar supplemented with bromothymol blue.

Fig. 7: *Xenorhabdus* bacterium with the peritrchious flagella.

Fig. 8: Protein profile of *Xenorhabdus* isolates.

Fig. 9: Total genomic DNA of *Xenorhabdus* isolates.

Fig. 10: Amplified products of 16S rDNA.

Fig. 11: Restriction Pattern of PCR-Amplified product of 16Sr DNA digested with AluI, HinfI and MspI.

Fig. 12: Restriction pattern of PCR-amplified product of 16S rDNA digested with EcoRI, KpnI, Nhel, Smal and HindIII.

Fig. 13: Cluster analysis (UPGMA) of the four PCR-RFLP genotypes of 16S rDNA.

Fig. 14: RAPD amplifications of four different *Xenorhabdus* isolates with primer OPC-06, OPC-09, OPA-13 and OPA-18.

Fig. 15: RAPD amplifications of four different *Xenorhabdus* isolates with primer OPC-11, OPC-12, OPH-04 and OPH-15.
Fig. 16: RAPD amplifications of four different *Xenorhabdus* isolates with primer OPH-18, OPH-19 and OPS-13.

Fig. 17: Dendrogram analysis showing distances among four isolates of *Xenorhabdus* based on polymorphisms generated by RAPD-PCR.

Fig. 18: Growth pattern of *Xenorhabdus* isolate in different culture media.

Fig. 19: Graphical representation of protein content of cell free supernatant of *Xenorhabdus* isolate grown in different culture media.

Fig. 20: Isolation of toxin complex by DEAE ion exchange chromatography.

Fig. 21: Characterization of purified toxin by gel filtration.

Fig. 22: SDS-PAGE protein Profile of samples obtained during the various stages of protein purification.

Fig. 23: SDS-PAGE protein profile depicting various subunits of purified toxin by gel filtration chromatography.

Fig. 24: The effect of pH on toxin activity.

Fig. 25: The effect of temperature on toxin activity.
