ACKNOWLEDGEMENTS

At the very outset, I bow my head with reverence and dedicatedly accord my recondite gratitude to the Almighty, the merciful and compassionate whose grace, glory and blessings allowed me to complete this endeavor.

It has been my great privilege to work under the inspiring and encouraging guidance of my Supervisor, Dr. S K Sharma, former Professor-cum-Director, Energy Research Centre, Panjab University Chandigarh. His unceasing encouragement, inspiration, ever willing help, precise and constructive criticism and meticulous suggestions throughout the course of this investigation enabled me in executing my research work. His deep knowledge of the subject and sense of dedication besides polite and helping nature will be part of my memory for ever. I consider myself very fortunate to have worked under his able guidance.

No words can suffice my feelings of gratitude to my dearest wife, whose immense patience and encouragement were the constant source of inspiration during the entire period of my study. The love and affection of my respected mother has also been a source of immense strength that goes beyond expression.

The cooperation extended by Mr. G S Bains, Landscape officer in providing me the manpower and other facilities for the construction of greenhouse is also highly acknowledged. The help of the field staff during experimental period is also praise worthy.

Finally, I am very thankful to the authorities of Punjab Agricultural University for granting me the study leave for achieving the dream of my life.
