ACKNOWLEDGEMENT

It would not have been possible to write this doctoral thesis without the help and support of the kind people around me, though it’s only possible to give particular mention of a few names here.

Above all, I would like to thank my guide Prof. Umesh Chandra Sarma, Vice Chancellor of Srimanta Sankaradeva University of Health Sciences, Guwahati, Assam.

I am most grateful to Mr Rustam Ali, statistician who guided me in statistical analysis and in interpretation of all statistical data for this study.

My mother and sisters and all my relatives have given me their unequivocal support throughout, as always, for which my mere expression of thanks likewise does not suffice.

I would like to thank my relatives for their encouragement and Support.

I would also like to express my gratitude to All Head of the Institutions, employees and all respondents without whom my work would not have been successful at all.

Last, but by no means least, I thank my friends, colleagues elsewhere for their support and encouragement throughout the study.
