LIST OF ILLUSTRATIONS

Figure:

1. Mean monthly meteorological data during the crop period.
2. Lay-out plan of experimental field.
3. Green yield, dry matter per cent and dry matter yield.
4. Digestible dry matter per cent and production.
5. Crude protein per cent and production.
6. Digestible cellulose per cent and production.
7. Acid detergent lignin (ADL) per cent and production.
8. pH, lactic acid, acetic acid, butyric acid and ammoniacal nitrogen (NH₃-N) of Sorghum silage.
   A. Varietal differences.
   B. Effect of nitrogen levels.
   C. Effect of methods of nitrogen application.

Photograph:

1. Vidiasha 60-1 variety of Sorghum at harvest (soft dough) stage.
2. Chaffing of Sorghum and filling of silos.
3. The experimental silos.
4. Energy value estimation with the help of Ballestic Bomb Calorimeter (Gallen-Kamp; CB-370.)
